Youth policies and institutional learning among regions

The article has the objective of analysing methods and policy learning processes to deal with an emergency, that of youth employment, which only by a supranational effort can find the chance for an effective response.

This article takes into account the lessons learned in the initiatives of policy learning promoted by the Regional Governments, both independently (i.e. Tuscany's *Giovanisì* project) and in coordination with each other, also using European resources (the OSA-One Step Ahead project – joined, in addition to Tuscany, by Wales, the Basque Country, Styria, Jämtland, Baden-Württemberg).

1 Common trends in regional youth policies

During the years of economic crisis a wide range of policy measures connected with both the entire life-cycle and the periods of transition have been adopted. Regional governments have focused to provide measures that aim to:

- *Complete the training period and encourage the acquisition of the right skills.* The study period must lead to the acquisition of real skills that can be used in the labour market. To this end it is necessary to reinforce the connection between school and the workplace.
- *Encourage insertion and development in the labour force,* through the provision of incentives that aim to promote and diffuse the use of tools such as apprenticeships and internships, improve orientation and counselling services, the development of entrepreneurship, competence and mobility between different jobs and different countries.
- *Limit disadvantageous situations* through the monitoring of the individual's life stages and consequently the implementation of relevant measures for each transition.

- *Develop an adequate social and cultural life*, through the promotion of the evolution of quality social networks, conferring new tasks and functions to the existing cultural infrastructure so that they are able to respond constantly to the various and changing needs of the young.
- *Foster independence and parenthood*, guaranteeing basic dignified conditions to allow the individual to conduct an independent and autonomous life.
- *Offer income support and taxation incentives*, via salary allowances, forms of taxation assistance and bureaucratic simplification that favours the increase of employment and the creation of businesses by the young.

This is the common frame of reference that makes possible the mutual learning. The improvement of the effectiveness of policies that can support these common trends and the search for new solutions have driven regional governments to engage in processes of policy learning.

2 Regional Diversities

2.1 State forms and welfare models as learning filters

Common trends foster the processes of policy learning and transfer between regional governments. However, we must also consider the factors that serve as obstacles to these processes. These are factors that constitute the filter to the possibility of policy learning. First, we have to take into account the role of different forms of state and then the different welfare models. In dealing with learning processes among regional Governments, it must be remembered that the Governments have various powers. They operate – in Europe – under three different forms of State:

- *Federal States (like Germany)*: In these cases, in particular for Germany, it is not always possible to distinguish clearly between the regional powers and the national ones.
- *Regionalised States (like Italy and, partly, Wales)*: In these cases, one must remember that some regions have legislative power, some others are limited to administration.
- *Unitary States (like Sweden)*: In unitary states there exists only administrative self-Government at provincial and local levels of Government.

In Northern Government. tive and regi on the S' (Federighi/T that regulate fare models also the case the family, o Welfare mod however the modified thro tion rules fo terminated. As welfare iden' logical inspir

- *Soci* salis
- *Chri* sidia med catic
- *Libe* vate and j

This differen applied to th that such an :

In Northern Europe there was a stronger tradition of local autonomy or self-Government. Sweden's 290 municipalities are run according to national legislative and regulatory frameworks. Municipal responsibility for schools is based on the Swedish commitment to self-Government and democracy (Federighi/Torlone 2010, p. 9). Also the welfare models play the role of filters that regulate the ability of policy learning and transfer. There are various welfare models within the Member States and Regional Governments and this is also the case for youth policies. Some of these are more focused on the role of the family, others on work, and others again on the individual and the State. Welfare models are certainly the product of public policies – fiscal and social – however they are first of all artefacts of the culture and traditions of a country, modified through social projects and conflicts through which the new distribution rules for access to goods and services by the different recipients are determined. As a rule, starting from the second half of the last century, studies on welfare identified three different models of welfare correlated to various ideological inspirations or social projects (Esping-Andersen 1990):

- *Social-Democratic welfare states* are based on the principle of universalism granting access to benefits and services based on citizenship.
- *Christian-democratic welfare states* are based on the principle of subsidiarity and the dominance of social insurance schemes, offering a medium level of decommodification and a high degree of social stratification.
- *Liberal regimes* are based on the notion of market dominance and private provision; ideally, the state only interferes to ameliorate poverty and provide for basic needs, largely on a means-tested basis.

This differentiation was then taken up and examined by subsequent studies applied to the field of youth policies. We quote a summary in Box 1 pointing out that such an articulation was also adopted by the Youth research (Isfol 2008).

GEOGRAPHICAL CLASSIFICATION	ITALY	UNITED KINGDOM	GERMANY	NORDIC COUNTRIES
Gallie, D./ Paugam, S. (2000)	Centralised model ¹	Community-based model ²	Protective model ³	Universalistic Model ⁴

Sapir (2006), welfare models classified by equity/ efficiency ⁹	Social system that offers neither equity nor efficiency	Efficient but inequitable social model	Social model that provides greater equity but less efficiency	Social model that provides both equity and efficiency

Box 1: Previous classification models.

Notes:

¹ Mediterranean Model; Greece, Italy (hybrid), Portugal, Spain. Target: Specialised groups of youth; Youth sector: Major youth sector.

² Ireland, United kingdom. Target: disadvantaged youth, Youth sector: minor or no youth sector.

³ Austria, Belgium, France, Germany, Liechtenstein, Luxemburg, The Netherlands. Target: whole generation of youth and disadvantaged people - Youth sector: Major youth sector.

⁴ Denmark, Finland, Norway, Sweden. Target: whole generation of youth; Youth sector: Minor or no youth sector.

⁵ Greece, Italy, Portugal and Spain.

⁶ Ireland and United Kingdom.

⁷ Austria, Belgium, France, Germany and Luxemburg.

⁸ Denmark, Finland, Sweden and The Netherlands.

⁹ On the sustainability of social models faced with globalisation, it seems to emerge that the inefficient models are not very sustainable (continental and Mediterranean), and that they must stand up to more compelling sustainability constraints. The Anglo-Saxon and Nordic model would therefore seem more sustainable than the continental and Mediterranean models that require reforms for greater efficiency by reducing disincentives to growth and employment.

In 2011, the CSEHYP project has in turn proposed a typology of models at the conclusion of research on the structure of welfare policies, education and training systems, labour markets, youth unemployment policies, gender relations and representations of youth across the EU-27 countries. They highlighted a liberal (Anglo-Saxon), a universalistic (Nordic), a subprotective (Mediterranean), an employment-centred (continental) and a post-socialist (central and east

European) model of welfare provision, including related youth transition regimes. In a report on all the research relating to youth policies carried out within the 7th Framework Programme of the DG Research of the European Commission (2012) the following summary of the models in Europe are reported:

„The *liberal welfare approach* relies on individual responsibility, with young people facing pressure to enter the workforce and to become economically independent as soon as possible. Although the labour market has a high degree of flexibility it also carries much insecurity for youth and considerable risks of social exclusion. Without extra key support they are socially excluded.

The *universalistic welfare* approach reflects the individualisation of life courses in the frame of integrated and comprehensive education systems. Young people are first of all regarded to belong to the education system and they are eligible for supportive education allowances for all over 18 years old. Also the labour market policies leave space for individual decision-making. The universalistic (...)model carries the principle of equal opportunities. It relies on co-operation with families in creation of the equal opportunities.

The *subprotective welfare approach* lacks reliable training pathways into the labour market. That creates inequalities among youth depending on the resources of their families of origin. Long dependency on families leaves young people without a formal position and status. According to data from CSEHYP and YiPPEE, young people with disadvantaged family backgrounds are at a very high risk of unsuccessful or delayed transitions to autonomous life in these countries.

The *employment-centred welfare approach* divides youth by the school system: different tracks in education separate pupils from the age of 10 or 12 according to their performance. A two-tiered division of social security favours those who have already been in regular training or employment, while others are entitled to a lesser form of social assistance. For the youth with disadvantaged backgrounds, this model is clearly exclusive and stigmatising.

Post-socialist welfare approaches vary from country to country, having a variable welfare mix of policies from the socialist past and copied from contemporary Western societies, with specific adaptations to the different countries' needs. This model is rather close to the subprotective welfare states, with public structures often being experienced as extremely unreliable." (European Commission 2012, S. 27f.)

2.2 Re-interpretation of models in the regional perspective

The modelling proposed in the research just cited still requires a reinterpretation if used as a key for interpreting regional experiences if considered in this study, at least for some cases.

*About the employment-centred welfare approach:
Baden-Württemberg*

by Andrea Bernert-Bürkle

Youth policy in the German Federal State of Baden-Württemberg is not a standard field of policy. A wide variety of policy areas have an influence on the lives of young people living in the south-west of Germany, like:

Education policy, economic policy, labour market policy, social policy, family policy, 'classic' youth policy, which only covers part of all of the strategies and activities related to young people in Baden-Württemberg. The main political objectives from which the concrete strategies and measures derive are as follows:

- All young people should have the chance to have an independent and responsible social life.
- Every young person who is willing and able to complete education or training should be given the opportunity to complete a vocational training or qualification programme.
- Everybody should have the same educational opportunities, including socially, culturally and financially disadvantaged young people.
- Efforts must be made to combat the impending shortage of skilled labour and to mitigate the negative consequences of demographic development for the economy and society.
- The employability of young people and their ability to complete education and training form one of the most important objectives of school and vocational education.
- The personal interests and strengths of individual children and young people should increasingly become a focus.

Many activities to support young people in Baden-Württemberg are employment-centred. They focus on a successful transition from education to work because good and save jobs are regarded as the most important basis of an independent life. During the past years, rather low unemployment rates among young people have been achieved by a strong co-operation of all sectors of society including politics, the economy and the social partners (employers, their associations and Chambers and associations of employees), the educational sector (schools, universities, further education, e.g. the 'Volkshochschulen'), public administration and executive bodies, non-Governmental organisations

such as church etc. The reform of the employment market in Baden-Württemberg

such as churches, various welfare associations, sports and cultural institutions etc. The reform of the welfare system that is now even more related to employment than before also contributed to the good development on the labour market in Baden-Württemberg. The German system is therefore often called an employment-centred welfare model.

About the liberal welfare approach: Wales

by Steven Fletcher

The definition of the UK welfare model, which has been adopted by several European studies, is partially valid for Wales and is useful to identify differences in the over-arching Welsh approach and the balance of policies in Wales as compared to other European approaches. Since devolution of key policy areas from the UK Government and the first National Assembly for Wales in 1999, Wales has progressively developed a distinct approach to youth policy from that in England. This divergence increasingly challenges identification of a single 'UK Welfare model', although many areas of welfare are not devolved to Wales and many devolved policy areas still retain common UK-wide characteristics as compared to other parts of Europe. Instead the liberal approach, the Welsh youth policy approach relies on the following components:

- There is no specific theme within the Programme for Government's twelve themes for 'youth in the 16-32 cohort', and measures that target specifically or will be of benefit to such youth are included across all themes (OSA Regional Monograph – Wales 2012, p. 27). However, recent developments within the Welsh Government have increasingly aligned resource and policy to address policy needs for the 16-24 cohort, particularly within the policy sphere of youth employment and progression. The Welsh Government within its Programme for Government uses a range of approaches to target policy and resource interventions where needed. For example, measures include targeting to a variety of age, disadvantage and geographic criteria, amongst others, allowing flexibility in approach as fits the policy (OSA Regional Monograph – Wales 2012, p. 28).
- There is a particular emphasis on creating changes in the adult (post-16) cohort by investing significantly in the early, and in many instances the very early stages of an individual's life cycle in order to address disadvantage. Wales has a particularly strong programme of interventions aimed at infants and their early years, at parents and at families (OSA Regional Monograph – Wales 2012, p. 28).

- In schools, priorities include improving standards in literacy and numeracy, and to reduce the impact of deprivation on educational achievement.
- For those moving into Further Education (FE) (post-16) the Programme aims to provide access to good quality provision with no barriers to participation. Further Education includes the tertiary study of both the vocational and academic learning routes below higher education. In Higher Education (HE), the aim is to transform the sector so that HE increasingly supports the economy in Wales, whilst providing the appropriate financial support to students. (OSA Regional Monograph - Wales 2012, p. 28) The high level of opportunities for post-16 learning and the range of policies giving financial support to post-16 learners significantly encourages further learning and the attainment of skills by youth, as opposed to low skilled and early entry into the labour market as implied by the 'UK welfare model'. The policies do support 'individual personal development and responsibility' and have a focus on youth becoming 'economically independent' but significant support is provided to support youth in reaching their full potential and to help them secure high quality and sustainable employment. Wales is increasingly divergent from England in its policies for supporting youth financially throughout post-16 learning, offering a higher level of financial support than England in many policy areas.
- The principle of investing in skills is one guiding aspect of the Welsh Government's approach to Growth and Sustainable Jobs, with further integration of skills with economic, education, procurement and planning policies to deliver greater benefits to the Welsh economy.
- The principles of investing in infrastructure, skills, innovation and improving the business environment guide the Welsh Government approach. This includes further integrating economic, education, skills, procurement and planning policies to deliver greater benefits to the Welsh economy, encouraging greater levels of private sector investment and employment, increasing the links between academia and business, and positioning Wales as a low carbon, green economy.
- Family and social policies that are targeted at or will have a beneficial impact on outcomes for young people in the 16-32 cohort can be found across the themes of the Programme for Government The Aims include: better health for all with reduced health inequalities; high quality, integrated, sustainable, safe and effective people-centred services that build on people's strengths and promote their well-being; making

communities in Wales safer through reductions in anti-social behav-
iour, crime (including the fear of crime), substance misuse and the in-
cidence and impact of fires as well as effective co-ordination of emer-
gencies; creating a fair society free from discrimination, harassment
and victimisation with cohesive and inclusive communities; enriching
the lives of individuals and communities through regional culture and
heritage.

- Reducing poverty, especially persistent poverty amongst some of the poorest people and communities in Wales, and reducing the likelihood that people will become poor, remains a significant priority addressed by a cohesive, cross-cutting approach. Ensuring that people have a high-quality, warm, secure and energy-efficient home to live in is a contributory policy for reducing such poverty. There is a strong component to addressing the issue of disadvantage through community-based, geographically focussed programmes, identifying communities with significant levels of disadvantage and providing additional support.

About the subprotective welfare approach: Tuscany

by Gianni Biagi

In Tuscany the reference context is very detailed and complex. In this region typical aspects of Italian favouritism are found, often very pronounced. On the one hand the high degree of favouritism, which often leads to localism unable to be far-sighted, yet at the same time is a constant and stubborn attachment to the elements of the centuries-old tradition in the field of social achievements and experiences of social mutuality.

Therefore the Tuscan model is a set of complex activities that tend to hold together specific public policies, public policies that are general and aimed at maintaining the existing elements of social cohesion, in some cases, from the thirteenth century, and private policies linked together by family adhesion. Let us think about interventions that ensure an efficient system of medical emergency, still connected to the mercies founded in Florence in the mid 1200s, or to steps aimed at safeguarding historical traditions rooted in small groups of people and communities, but which represent the identity value of places and communities, and which in the end make the community function as the first social group of reference, even during difficult economic times.

The approach of policy is always a two-pronged approach with respect to these characteristics. On the one hand there is a tendency, often rightly so, but with little success especially now in times of crisis, to look beyond, even if trying to hold together tradition and innovation, warning of the dangers of excessive particularism, which does not allow being measured as a system region on the national and international level. This is the classical approach, and in this fundamental context, activities relate to great choices of infrastructure strategy, macro-economic policies, on the international position of tourism, on dimensional choices for local public services, and on strategies for cultural systems, to name a few. This is also the classic theme of the metropolitan city and the policies of institutional reorganisation.

In these small contexts, often it is not good and often very expensive. Only a constant and tenacious and effective intervention of the public regulator may affect these strategic sectors. In other fields, public policies find important support in conditions of private activities that are being enacted independently and they then support these public policies. In these interventions, public policies always play a decisive role but should not, by themselves, support and guarantee an effective and comprehensive solution to the problems.

This does not mean they are not necessary. It does mean that the context in which they move is different from the previous one.

In the first case the lack of public policies is nullifying for the fulfilment or non-fulfilment of a given event. In the second case, public policies help, often in a decisive way – if we think about the redundancy funds and the redundancy funds in derogation of the past few years – surpassing even long times of difficulty, but they do not act alone in the economic system. They are helped by pre-existing external conditions.

This pre-existence in Italy is often called 'family'. There is no need to repeat the rhetoric of the family and its various meanings, even lexical. And not enter into a sociological context that does not belong to us completely and says in several analyses from Touraine (*globalisation and the end of social movements*) to Bauman (*liquid life*), about the crisis of the social system and the fragmentation of society and indicates the foundation of the new system in the subject and in the individual.

Yet in Italy the family, as the basis of the social system, is not dead. The crisis has triggered the network of family protection, a characteristic of national identity with almost a third of Italians (31%) who live with their mother. These data

are reported with their minutes away

Among the part of the family and, more spe

The effectiveness of the „Giovani system of refe

are reported by Censis-Coldiretti from which it is clear that 31% of Italians live with their mother and as many as 42.3% has a mother who lives at most thirty minutes away (Coldiretti-Censis 2012).

Among the policies that are related to fighting the crisis are those more in support of the family and its members in greater difficulty, in particular women and, more specifically, those who work.

The effectiveness of public policies implemented, e.g. by the Tuscany Region in the „Giovanisi” project, depends on maintaining the conditions of the social system of reference.

Beyond the objective difficulties of the public budget, the effectiveness of limited resources depends on how these policies interact with how the social model in the region functions. The family in this context is at least a structure that facilitates operating conditions and maximises, or at least tends to do so, the investments that take account of its existence. One might reflect on the universality or specificity of this institution. We must not disturb history to be able to say that the link between Italy and Catholicism is one of the central elements of this condition of the family in Italy; nevertheless even in the secular world the concept of economic value of the family has now been established, maybe declined in different forms and structures, but still able to form the basic core of the Italian social system.

In addition to the forms of the state and welfare models, the theory of punctuated-equilibrium forces us to consider another factor: the rhythms of stasis/crisis, stability/change. Each regional government has a different pace. Stability and incrementalism in kind prevail. But periods of stability are followed by periods of crisis and profound change. The processes of Institutional learning are affected by the phase in which each of the partners is located. In periods of stability institutions are open to limited changes. In periods of profound change, you can also detect the focus on policy models (Federighi 2012, p. 25).

3 Facilitating factors

The processes of policy learning are facilitated by the existence of common grounds for comparison, natural and social. With regard to youth policies, facilitating factors can be identified in the common reference to their age youth life-cycle transitions and in the objectives of the policy (not so dissimilar).

3.1 Lifecycle youth policies for educational and professional growth

The living and working conditions of young people are the result of a variety of factors, therefore no single policy measure – nor several together – can guarantee any substantial change. What is needed is a balanced system of measures with adequate impact capacities.

The problem is connected to the complexity of youth policies due to the fact that youth is characterised by numerous transitions. The possibility and the way in which each individual passes the tests related to a transition can influence the next path, even in a negative way. The problem stems from the fact that the tests and the „obstacles” that each individual must overcome when young may be characterised by factors that discriminate against people not on the basis of merit or individual qualities, or criteria based on fairness.

Public policies are generally intended to correct the distortions in the various transitions. The transitions from youth and that mark the path towards achieving autonomy are numerous, and vary according to the positions held by each young person in various life cycle stages. Limiting ourselves to consider the possible positions of a person with respect to education and training, regional policies distinguish between young people involved in the system of education and VET, compared to young people engaged in vocational training, work experience, compared lastly to young people who do „other things”, the NEETs, i.e. not affected by any of these positions which are the object of training policies and active labour market policies (see Box 2).

These different starting positions can evolve and be declined on the grounds of a young person's age. From these positions, a young person starts his own pathway through the various transitions and life cycles, which from leaving secondary education will lead to the first job, higher education, economic independence and parenthood.

policy lear
their cove
is more ex
transition:
of measur
achievable

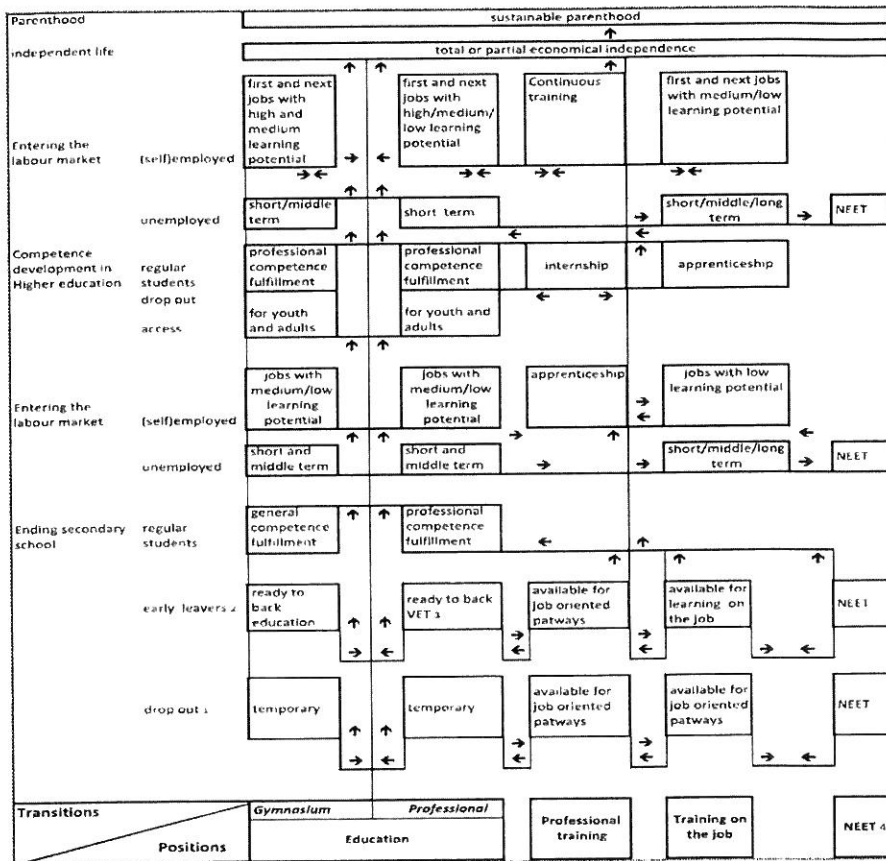

Among young people there are those who reach maturity without the need for special support, other than that available in private, social and public life. It is the function of public policies to ensure that this result is extended to all those who deserve it.

Therefore it is necessary that none of the transitions be left to chance, i.e. that they are not monitored through interventions that prevent injustice and the loss of talent. Each transition from one situation to the next – for example, from student to apprentice – is a transition which, if mishandled, produces exclusion and delays or denies inclusion in work. Each passage actually has the function of filtering, i.e. to guide people towards alternative life paths, more or less desirable. At each step, the growth prospects of a young person are being challenged. The dysfunctions of cultural mechanisms, built by society over time, through which the future of a person is predetermined, have effects that are difficult to recover.

These are the steps, the transitions that need to be corrected and managed by youth policies through measures inspired by fairness and merit. Each transition can be associated to devices that select those who act independently, those who need support or recovery, those who have substantial need for social protection and support, those who pass through the mechanisms of social protection or exclusion.

In Box 2 we have tried to present synthetically the various possible paths open to a young person because of the starting position at the time of becoming a „youth“. The picture is not complete; consideration is not given to all the factors that contribute to the growth of young people: from social networks to cultural life, mentioned in other sections of this book.

However, this pattern highlights one of the results of the study about regional policy learning; we refer to the fact that public policies are more effective when their coverage of the different transitions and life conditions of a young person is more extensive. To achieve this, public policies try to preside over each of the transitions that are represented in the diagram by arrows pointing to the types of measures that accompany young people to one of the possible positions achievable.

Box 2: Fields of youth policies interventions according to youth transition phases and conditions.

Notes:

1. Pupils who *drop out* before the end of secondary education
2. *Early leavers* population aged 18-24 having attained at most lower secondary education and not being involved in further education or training
3. VET-Vocational Education and Training

We now analyse the meanings of the graph in the field of youth policies:

1) *Drop-outs:*

The measures may accompany young people in search for

- a. A new placement in the systems that they have dropped out of, or in qualifying activities or work activities even if created with a prevalently educational aim. This set of measures is to prevent the passage to NEET and, if it happens, their possible recovery.
- b. Leaving activities of recovery and entering into situations with a higher educational content, with greater growth prospects, including reinstatement in formal education.

2) *Early leavers:*

The measures can be of different types depending on whether they are aimed at helping young people:

- a. To re-enter the education system for the attainment of a degree higher than that held, or
- b. To assume qualifying activities or work activities even though created for prevalently educational purposes. This set of measures is to prevent passing to NEET and, if necessary, possible recovery.

3) *Regular students:*

The measures are aimed at improving the quality of secondary education and facilitating the transition to work or further study at the higher education level.

4) *First entry into the labour market:*

The measures that accompany this phase are characterised by various tasks:

- a. Encourage the reduction of unemployment and inactivity times.
- b. Ensure the quality of work done.
- c. Encourage growth through contracts alternating study with work.
- d. Prevent passing to NEET and eventual recovery of young people exiting the labour market and exiting training.

5) *Competence development in higher education:*

The related measures are largely absorbed by the support provided to university systems, as well as to the advanced professionalisation of young people. More specifically we can address the measures that support the following transitions:

- a. Access of both young people and young adults to higher education.
- b. The prevention and recovery of drop-outs.

conditions.

dary edu-

- c. The development of a culture of production and acquisition of skills required by the labour market.
- d. The promotion of measures to improve the access of graduates to the labour market (spin-offs, entrepreneurship, apprenticeship, internship, etc.).

6) *First entry into the labour market of high skilled young people:*

The measures that accompany this phase are characterised by various tasks:

- a. Encourage the reduction of unemployment and inactivity times.
- b. Ensure the quality of work performed, its high learning potential, even though continuing education.
- c. Promoting access through employment contracts for high skilled workers or through entrepreneurship and innovation support, also activating special fiscal policies.
- d. Prevent the transition of young people to NEET and if necessary their eventual recovery.

7) *Independent life and parenthood:*

The measures that accompany these transitions act on all the components of social policies.

3.2 Policy objectives

The policy objectives are to be distinguished by the enunciation of principles. The rhetoric may be different, but the choice of fields of action and objectives are similar. This proximity is a key element underpinning the ability to give rise to processes of policy learning. The analysis of the objectives of youth policies is used to identify the general framework of the aspirations of a Government. The analysis of the objectives assumed by regional policies focus on some priority areas such as education and training, work, culture, everyday life. Let us examine quickly some of the different forms that can be found in documents of the regions considered:

a) Education and training

The reference to the individual right of young people to education and training is common, the reference age can vary on the basis of national standards. This right is identified with the permanence of young people in educational institutions for a certain number of years, or until they achieve a diploma. Reference to the idea of employability is an element of innovation of the objectives, in particular if it is associated with consideration of the learning outcomes of young people. What matters is not only the degree obtained, but the actual

skills acquired a goals that expressed to young (Württemberg), regional policies to of individual children. This objective leads to choose to and to distinguish the concept of terms of „one social propensities.

b) Work

Access to employment. On the one hand, of a skilled worker. At the same time, this fits the person, i.e. facilitating conditions to quality of the work

c) Daily life

The progressive adulthood has led to quality of everyday that people have in, accompanied by able, safe and effective and promote their among young people attention to the N lies and parenting

d) Culture and social

The theme of cultural regional objective individual situation and cultural right to equality in

skills acquired at the end of studies. This gives rise to new formulations of the goals that express the commitment to growth of the quality of education offered to young people. Although present in only one case (Baden-Württemberg), appearance is significant among the general objectives of regional policies to recognise the need that „the personal interests and strengths of individual children and young people should increasingly become a focus“. This objective leads policies to recognise that the school should „enable students to choose their own focus areas according to their aptitudes and interests and to distinguish themselves as individuals“. This is an important evolution of the concept of the right to education and training, no longer understood in terms of „one school for all“, but the recognition of differences and individual propensities.

b) Work

Access to employment is the common goal of youth policies of all governments. On the one hand, in some cases there is explicit reference to ensuring the supply of a skilled workforce to meet the needs of the economic system. At the same time, this function is also presented from the point of view of the young person, i.e. facilitating their access to the labour market and, in particular, creating conditions to begin a career in the best way. Attention to the educational quality of the workplace is also associated with this.

c) Daily life

The progressive delay by a growing number of young people in transition to adulthood has led regional public policies to take on objectives related to the quality of everyday life. Hence the adoption in Wales of the objective to ensure that people have a high-quality, warm, secure and energy-efficient home to live in, accompanied by the objective of ensuring high quality, integrated, sustainable, safe and effective people-centered services that build on people's strengths and promote their well-being. These objectives contribute to reducing poverty among young people, and its consequences. In this framework there is growing attention to the NEETs and to the need to encourage the creation of new families and parenting.

d) Culture and social life

The theme of cultural and social life of young people occurs among the strategic regional objectives with different purposes, owing to the specificity of each individual situation. In regions with strong ethnic identity, the defence of language and cultural heritage becomes an objective linked to the defence of the right to equality in education and employment in relation to ethnic and linguis-

tic majorities. The objective is also assumed in other regions with the function of enriching the cultural and social life of young people and at the same time, in particular for peripheral regions, to increase the regions' ability to attract and retain young people who aspire to live in lively and dynamic cities.

4 Conclusions

The setting of the policy learning process proposed is functional to identification of a common ground of mutual learning in the field of youth policies. Today the objective of governments should not so much be the provision of short-term measures connected with the various transition phases of the young persons' life, but rather personal and professional growth learning processes that accompany them throughout their life-cycle.

Alongside concrete and specific measures related to autonomy, work and the family it is important to offer access to a variable-duration course that provide opportunities of various types and levels, guarantees the development of talent and increases social inclusion to those in need. This involves offering assurance to young people, in their various life-cycle phases and for the time required, periods of accompaniment that include personalised and individualised programmes and made-to-measure packages that lead them towards the realisation of objectives. These objectives range from the completion of education cycles to the acquisition of qualifications or specific professional skills, access to the first or second job and the creation of a business and its management, to insertion in quality social networks and participation in social life.

The research on the processes of institutional learning among regions has faced major challenges. They may be addressed if policies and research will be able to work together.
