About Frontiers

Frontiers is more than just an open-access publisher of scholarly articles: it is a pioneering approach to the world of academia, radically improving the way scholarly research is managed. The grand vision of Frontiers is a world where all people have an equal opportunity to seek, share and generate knowledge. Frontiers provides immediate and permanent online open access to all its publications, but this alone is not enough to realize our grand goals.

Frontiers Journal Series

The Frontiers Journal Series is a multi-tier and interdisciplinary set of open-access, online journals, promising a paradigm shift from the current review, selection and dissemination processes in academic publishing. All Frontiers journals are driven by researchers for researchers; therefore, they constitute a service to the scholarly community. At the same time, the Frontiers Journal Series operates on a revolutionary invention, the tiered publishing system, initially addressing specific communities of scholars, and gradually climbing up to broader public understanding, thus serving the interests of the lay society, too.

Dedication to Quality

Each Frontiers article is a landmark of the highest quality, thanks to genuinely collaborative interactions between authors and review editors, who include some of the world's best academicians. Research must be certified by peers before entering a stream of knowledge that may eventually reach the public - and shape society; therefore, Frontiers only applies the most rigorous and unbiased reviews.

Frontiers revolutionizes research publishing by freely delivering the most outstanding research, evaluated with no bias from both the academic and social point of view. By applying the most advanced information technologies, Frontiers is catapulting scholarly publishing into a new generation.

What are Frontiers Research Topics?

Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: researchtopics@frontiersin.org

AUGMENTATION OF BRAIN FUNCTION: FACTS, FICTION AND CONTROVERSY

VOLUME I: BRAIN-MACHINE INTERFACES

Topic Editors:

Mikhail Lebedev, Duke University Durham, United States

Ioan Opris, University of Miami, United States

Manuel F. Casanova, University of South Carolina, United States

Volume I, entitled “Augmentation of Brain Functions: Brain-Machine Interfaces”, is a collection of articles on neuroprosthetic technologies that utilize brain-machine interfaces (BMIs). BMIs strive to augment the brain by linking neural activity, recorded invasively or noninvasively, to external devices, such as arm prostheses, exoskeletons that enable bipedal walking, means of communication and technologies that augment attention. In addition to many practical applications, BMIs provide useful research tools for basic science. Several articles cover challenges and controversies in this rapidly developing field, such as ways to improve information transfer rate. BMIs can be applied to the awake state of the brain and to the sleep state, as well. BMIs can augment action planning and decision making. Importantly, BMI operations evoke brain plasticity, which can have long-lasting effects. Advanced neural decoding algorithms that utilize optimal feedback controllers are key to the BMI performance. BMI approach can be combined with the other augmentation methods; such systems are called hybrid BMIs. Overall, it appears that BMI will lead to many powerful and practical brain-augmenting technologies in the future.

Table of Contents

- 08** *Editorial: Augmentation of Brain Function: Facts, Fiction and Controversy*
Mikhail A. Lebedev, Ioan Opris and Manuel F. Casanova
- 13** *Clinical Application of the Hybrid Assistive Limb (HAL) for Gait Training—A Systematic Review*
Anneli Wall, Jörgen Borg and Susanne Palmcrantz
- 23** *Decoding the ERD/ERS: Influence of Afferent Input Induced by A Leg Assistive Robot*
Giuseppe Lisi, Tomoyuki Noda and Jun Morimoto
- 35** *Neural Rhythmic Symphony of Human Walking Observation: Upside-Down and Uncoordinated Condition on Cortical Theta, Alpha, Beta and Gamma Oscillations*
David Zarka, Carlos Cevallos, Mathieu Petieau, Thomas Hoellinger, Bernard Dan and Guy Cheron
- 54** *Brain-Machine Interfacing Control of Whole-Body Humanoid Motion*
Karim Bouyarmane, Joris Vaillant, Norikazu Sugimoto, François Keith, Jun-ichiro Furukawa and Jun Morimoto
- 64** *Decoding Methods for Neural Prostheses: Where Have we Reached?*
Zheng Li
- 70** *Tapping Into Rhythm Generation Circuitry in Humans During Simulated Weightlessness Conditions*
Irina A. Solopova, Victor A. Selionov, Francesca Sylos-Labini, Victor S. Gurfinkel, Francesco Lacquaniti and Yuri P. Ivanenko
- 79** *Extraction and Restoration of Hippocampal Spatial Memories With Non-Linear Dynamical Modeling*
Dong Song, Madhuri Harway, Vasilis Z. Marmarelis, Robert E. Hampson, Sam A. Deadwyler and Theodore W. Berger
- 90** *Mechatronic Wearable Exoskeletons for Bionic Bipedal Standing and Walking: A New Synthetic Approach*
Gelu Onose, Vladimir Cârdei, Ștefan T. Crăciunoiu, Valeriu Avramescu, Ioan Opreș, Mikhail A. Lebedev and Marian Vladimir Constantinescu
- 99** *Selective Visual Attention to Drive Cognitive Brain–Machine Interfaces: From Concepts to Neurofeedback and Rehabilitation Applications*
Elaine Astrand, Claire Wardak and Suliann Ben Hamed
- 115** *Neurofeedback Therapy for Enhancing Visual Attention: State-of-the-Art and Challenges*
Mehdi Ordikhani-Seyedlar, Mikhail A. Lebedev, Helge B. D. Sorensen and Sadasivan Puthusserypady
- 130** *Predictive Technologies: Can Smart Tools Augment the Brain’s Predictive Abilities?*
Giovanni Pezzulo, Alessandro D’Ausilio and Andrea Gaggioli
- 136** *Trends and Challenges in Neuroengineering: Toward “Intelligent” Neuroprostheses Through Brain-“Brain Inspired Systems” Communication*
Stefano Vassanelli and Mufti Mahmud

- 153** *Bottlenecks to Clinical Translation of Direct Brain-Computer Interfaces*
Mijail D. Serruya
- 159** *Constraints and Adaptation of Closed-Loop Neuroprosthetics for Functional Restoration*
Robert Bauer and Alireza Gharabaghi
- 165** *Invasive vs. Non-Invasive Neuronal Signals for Brain-Machine Interfaces: Will One Prevail?*
Stephan Waldert
- 169** *Future Think: Cautiously Optimistic About Brain Augmentation Using Tissue Engineering and Machine Interface*
E. Paul Zehr
- 174** *Experimental Enhancement of Neurphysiological Function*
Diana Deca and Randal A. Koene
- 177** *As we may Think and Be: Brain-Computer Interfaces to Expand the Substrate of Mind*
Mijail D. Serruya
- 179** *What Limits the Performance of Current Invasive Brain Machine Interfaces?*
Gytis Baranauskas
- 189** *Inter-Laminar Microcircuits Across Neocortex: Repair and Augmentation*
Ioan Opris
- 194** *Canonical Circuits of the Cerebral Cortex as Enablers of Neuroprosthetics*
Manuel F. Casanova
- 197** *Understanding Entangled Cerebral Networks: A Prerequisite for Restoring Brain Function With Brain-Computer Interfaces*
Emmanuel Mandonnet and Hugues Duffau
- 203** *Brain Enhancement Through Cognitive Training: A new Insight From Brain Connectome*
Fumihiko Taya, Yu Sun, Fabio Babiloni, Nitish Thakor and Anastasios Bezerianos
- 222** *The Relationship Between Local Field Potentials (LFPs) and the Electromagnetic Fields That Give Rise to Them*
Colin G. Hales and Susan Pockett
- 226** *"Messing With the Mind": Evolutionary Challenges to Human Brain Augmentation*
Arthur Saniotis, Maciej Henneberg, Jaliya Kumaratilake and James P. Grantham
- 232** *Sleep for Cognitive Enhancement*
Susanne Diekelmann
- 244** *Partial Sleep in The Context of Augmentation of Brain Function*
Ivan N. Pigarev and Marina L. Pigareva
- 256** *Should I Stay or Should I go? Conceptual Underpinnings of Goal-Directed Actions*
Giovanni Mirabella
- 277** *Neostriatal Neuronal Activity Correlates Better With Movement Kinematics Under Certain Rewards*
Ioan Opris, Mikhail A. Lebedev and Randall J. Nelson

- 292** *On the Need to Better Specify the Concept of “Control” in Brain-Computer-Interfaces/Neurofeedback Research*
Guilherme Wood, Silvia Erika Kober, Matthias Witte and Christa Neuper
- 296** *Hemodynamic Responses on Prefrontal Cortex Related to Meditation and Attentional Task*
Singh Deepeshwar, Suhas Ashok Vinchurkar, Naveen Kalkuni Visweswaraiah and Hongasandra RamaRao Nagendra
- 309** *Augmenting Brain Function With Meditation: Can Detachment Coincide With Empathy?*
Shirley Telles, Nilkamal Singh and Acharya Balkrishna
- 312** *Augmentation-Related Brain Plasticity*
Giovanni Di Pino, Angelo Maravita, Loredana Zollo, Eugenio Guglielmelli and Vincenzo Di Lazzaro
- 334** *Brain-Machine Interfaces can Accelerate Clarification of the Principal Mysteries and Real Plasticity of the Brain*
Yoshio Sakurai
- 340** *Volitional Enhancement of Firing Synchrony and Oscillation by Neuronal Operant Conditioning: Interaction With Neurorehabilitation and Brain-Machine Interface*
Yoshio Sakurai, Kichan Song, Shota Tachibana and Susumu Takahashi
- 351** *Optimal Feedback Control Successfully Explains Changes in Neural Modulations During Experiments With Brain-Machine Interfaces*
Miri Benyamini and Miriam Zacksenhouse
- 368** *The Reactivation of Somatosensory Cortex and Behavioral Recovery After Sensory Loss in Mature Primates*
Hui-Xin Qi, Jon H. Kaas and Jamie L. Reed
- 382** *The Pregnane Xenobiotic Receptor, a Prominent Liver Factor, has Actions in the Midbrain for Neurosteroid Synthesis and Behavioral/Neural Plasticity of Female Rats*
Cheryl A. Frye, Carolyn J. Koonce and Alicia A. Wolf
- 394** *The Temple University Hospital EEG Data Corpus*
Iyad Obeid and Joseph Picone
- 399** *Classification of Single-Trial Auditory Events Using Dry-Wireless EEG During Real and Motion Simulated Flight*
Daniel E. Callan, Gautier Durantin and Cengiz Terzibas
- 411** *The Berlin Brain-Computer Interface: Progress Beyond Communication and Control*
