## Contents

<b>1</b>	<b>Preface</b> .....	<b>17</b>
<b>2</b>	<b>Plenary Sessions</b> .....	<b>19</b>
2.1	<b>A new paradigm for rating data models. <i>Domenico Piccolo</i></b>	<b>19</b>
2.2	<b>Statistical challenges and opportunities in modelling coupled behaviour-disease dynamics of vaccine refusal. <i>Plenary/Chris T. Bauch</i></b>	<b>32</b>
<b>3</b>	<b>Specialized Sessions</b> .....	<b>45</b>
<b>3.1</b>	<b>3.1 - Bayesian Nonparametric Learning</b>	<b>45</b>
3.1.1	Bayesian nonparametric covariate driven clustering. <i>Raffaele Argiento, Ilaria Bianchini, Alessandra Guglielmi and Ettore Lanzarone</i> .....	46
3.1.2	A Comparative overview of Bayesian nonparametric estimation of the size of a population. <i>Luca Tardella and Danilo Alunni Fegatelli</i> .....	56
3.1.3	Logit stick-breaking priors for partially exchangeable count data. <i>Tommaso Rigon</i>	64
<b>3.2</b>	<b>BDsports - Statistics in Sports</b>	<b>72</b>
3.2.1	A paired comparison model for the analysis of on-field variables in football matches. <i>Gunther Schaubberger and Andreas Groll</i> .....	72
3.2.2	Are the shots predictive for the football results?. <i>Leonardo Egidi, Francesco Paulli, Nicola Torelli</i> .....	81
3.2.3	Zero-inflated ordinal data models with application to sport (in)activity. <i>Maria Iannario and Rosaria Simone</i> .....	89
<b>3.3</b>	<b>Being young and becoming adult in the Third Millennium: definition issues and processes analysis</b>	<b>97</b>
3.3.1	Do Social Media Data predict changes in young adults' employment status? Evidence from Italy. <i>Andrea Bonanomi and Emiliano Sironi</i> .....	97

3.3.2	Parenthood: an advanced step in the transition to adulthood. <i>Cinzia Castagnaro, Antonella Guarneri and Eleonora Meli</i> . . . . .	106
<b>3.4</b>	<b>Economic Statistics and Big Data</b>	<b>114</b>
3.4.1	Improvements in Italian CPI/HICP deriving from the use of scanner data. <i>Alessandro Brunetti, Stefania Fatello, Federico Polidoro, Antonella Simone</i> . . . . .	114
3.4.2	Big data and spatial price comparisons of consumer prices. <i>Tiziana Laureti and Federico Polidoro</i> . . . . .	123
<b>3.5</b>	<b>Financial Time Series Analysis</b>	<b>131</b>
3.5.1	Dynamic component models for forecasting trading volumes. <i>Antonio Naimoli and Giuseppe Storti</i> . . . . .	131
3.5.2	Conditional Quantile-Located VaR. <i>Giovanni Bonaccolto, Massimiliano Caporin and Sandra Paterlini</i> . . . . .	140
<b>3.6</b>	<b>Forensic Statistics</b>	<b>146</b>
3.6.1	Cause of effects: an important evaluation in Forensic Science. <i>Fabio Corradi and Monica Musio</i> . . . . .	146
3.6.2	Evaluation and reporting of scientific evidence: the impact of partial probability assignments. <i>Silvia Bozza, Alex Biedermann, Franco Taroni</i> . . . . .	155
<b>3.7</b>	<b>Missing Data Handling in Complex Models</b>	<b>161</b>
3.7.1	Dependence and sensitivity in regression models for longitudinal responses subject to dropout. <i>Marco Alfo' and Maria Francesca Marino</i> . . . . .	161
3.7.2	Multilevel analysis of student ratings with missing level-two covariates: a comparison of imputation techniques. <i>Maria Francesca Marino e Carla Rampichini</i> . . . .	170
3.7.3	Multilevel Multiple Imputation in presence of interactions, non-linearities and random slopes. <i>Matteo Quartagno and James R. Carpenter</i> . . . . .	175
<b>3.8</b>	<b>Monitoring Education Systems. Insights from Large Scale Assessment Surveys</b>	<b>183</b>
3.8.1	Educational Achievement of Immigrant Students. A Cross-National Comparison Over-Time Using OECD-PISA Data. <i>Mariano Porcu</i> . . . . .	183
<b>3.9</b>	<b>New Perspectives in Time Series Analysis</b>	<b>192</b>
3.9.1	Generalized periodic autoregressive models for trend and seasonality varying time series. <i>Francesco Battaglia and Domenico Cucina and Manuel Rizzo</i> . . . . .	192
<b>3.10</b>	<b>Recent Advances in Model-based Clustering</b>	<b>201</b>
3.10.1	Flexible clustering methods for high-dimensional data sets. <i>Cristina Tortora and Paul D. McNicholas</i> . . . . .	201
3.10.2	A Comparison of Model-Based and Fuzzy Clustering Methods. <i>Marco Alfo', Maria Brigida Ferraro, Paolo Giordani, Luca Scrucca, and Alessio Serafini</i> . . . . .	208
3.10.3	Covariate measurement error in generalized linear models for longitudinal data: a latent Markov approach. <i>Roberto Di Mari, Antonio Punzo, and Antonello Maruotti</i>	216
<b>3.11</b>	<b>Statistical Modelling</b>	<b>224</b>
3.11.1	A regularized estimation approach for the three-parameter logistic model. <i>Michela Battauz and Ruggero Bellio</i> . . . . .	224
3.11.2	Statistical modelling and GAMLSS. <i>Mikis D. Stasinopoulos and Robert A. Rigby and Fernanda De Bastiani</i> . . . . .	233
<b>3.12</b>	<b>Young Contributions to Statistical Learning</b>	<b>239</b>
3.12.1	Introducing spatio-temporal dependence in clustering: from a parametric to a nonparametric approach . <i>Clara Grazian, Gianluca Mastrantonio and Enrico Bibbona</i> . . . . .	239

3.12.2	Bayesian inference for hidden Markov models via duality and approximate filtering distributions. <i>Guillaume Kon Kam King, Omiros Papaspiliopoulos and Matteo Ruggiero</i> . . . . .	248
3.12.3	K-means seeding via MUS algorithm. <i>Leonardo Egidi, Roberta Pappada', Francesco Pauli, Nicola Torelli</i> . . . . .	256
<b>4</b>	<b>Solicited Sessions</b> . . . . .	<b>263</b>
<b>4.1</b>	<b>Advances in Discrete Latent Variable Modelling</b>	<b>263</b>
4.1.1	A joint model for longitudinal and survival data based on a continuous-time latent Markov model. <i>Alessio Farcomeni and Francesco Bartolucci</i> . . . . .	264
4.1.2	Modelling the latent class structure of multiple Likert items: a paired comparison approach. <i>Brian Francis</i> . . . . .	273
4.1.3	Dealing with reciprocity in dynamic stochastic block models. <i>Francesco Bartolucci, Maria Francesca Marino, Silvia Pandolfi</i> . . . . .	281
4.1.4	Causality patterns of a marketing campaign conducted over time: evidence from the latent Markov model. <i>Fulvia Pennoni, Leo Paas and Francesco Bartolucci</i>	289
<b>4.2</b>	<b>Complex Spatio-temporal Processes and Functional Data</b>	<b>297</b>
4.2.1	Clustering of spatio-temporal data based on marked variograms. <i>Antonio Balzanella and Rosanna Verde</i> . . . . .	297
4.2.2	Space-time earthquake clustering: nearest-neighbor and stochastic declustering methods in comparison. <i>Elisa Varini, Antonella Peresan, Renata Rotondi, and Stefania Gentili</i> . . . . .	304
4.2.3	Advanced spatio-temporal point processes for the Sicily seismicity analysis. <i>Marianna Siino and Giada Adelfio</i> . . . . .	312
4.2.4	Spatial analysis of the Italian seismic network and seismicity. <i>Antonino D'Alessandro, Marianna Siino, Luca Greco and Giada Adelfio</i> . . . . .	320
<b>4.3</b>	<b>Dimensional Reduction Techniques for Big Data Analysis</b>	<b>328</b>
4.3.1	Clustering Data Streams via Functional Data Analysis: a Comparison between Hierarchical Clustering and K-means Approaches. <i>Fabrizio Maturo, Francesca Fortuna, and Tonio Di Battista</i> . . . . .	328
4.3.2	Co-clustering algorithms for histogram data. <i>Francisco de A.T. De Carvalho and Antonio Balzanella and Antonio Irpino and Rosanna Verde</i> . . . . .	338
4.3.3	A network approach to dimensionality reduction in Text Mining. <i>Michelangelo Misuraca, Germana Scepi and Maria Spano</i> . . . . .	344
4.3.4	Self Organizing Maps for distributional data. <i>Rosanna Verde and Antonio Irpino</i>	352
<b>4.4</b>	<b>Environmental Processes, Human Activities and their Interactions</b>	<b>353</b>
4.4.1	Estimation of coral growth parameters via Bayesian hierarchical non-linear models. <i>Crescenza Calculli, Barbara Cafarelli and Daniela Cocchi</i> . . . . .	353
4.4.2	A Hierarchical Bayesian Spatio-Temporal Model to Estimate the Short-term Effects of Air Pollution on Human Health. <i>Fontanella Lara, Ippoliti Luigi and Valentini Pasquale</i>	361
4.4.3	A multilevel hidden Markov model for space-time cylindrical data. <i>Francesco Laguna and Monia Ranalli</i> . . . . .	367
4.4.4	Estimation of entropy measures for categorical variables with spatial correlation. <i>Linda Altieri, Giulia Roli</i> . . . . .	373
<b>4.5</b>	<b>Innovations in Census and in Social Surveys</b>	<b>381</b>
4.5.1	A micro-based approach to ensure consistency among administrative sources and to improve population statistics. <i>Gianni Corsetti, Sabrina Prati, Valeria Tomeo, Enrico Tucci</i> . . . . .	381
4.5.2	Demographic changes, research questions and data needs: issues about migrations. <i>Salvatore Strozza and Giuseppe Gabrielli</i> . . . . .	392

4.5.3	Towards more timely census statistics: the new Italian multiannual dissemination programme. <i>Simona Mastroluca and Mariangela Verrascina</i> . . . . .	400
<b>4.6</b>	<b>Living Conditions and Consumption Expenditure in Time of Crises</b>	<b>409</b>
4.6.1	Household consumption expenditure and material deprivation in Italy during last economic crises. <i>Ilaria Arigoni and Isabella Sicilliani</i> . . . . .	409
<b>4.7</b>	<b>Network Data Analysis and Mining</b>	<b>418</b>
4.7.1	Support provided by elderly Italian people: a multilevel analysis. <i>Elvira Pelle, Giulia Rivellini and Susanna Zaccarini</i> . . . . .	418
4.7.2	Data mining and analysis of comorbidity networks from practitioner prescriptions. <i>Giancarlo Ragozini, Giuseppe Giordano, Sergio Pagano, Mario De Santis, Pierpaolo Cavallo</i> . . . . .	426
4.7.3	Overlapping mixture models for network data (manet) with covariates adjustment. <i>Saverio Ranciati and Giuliano Galimberti and Ernst C. Wit and Veronica Vinciotti</i>	434
<b>4.8</b>	<b>New Challenges in the Measurement of Economic Insecurity, Inequality and Poverty</b>	<b>440</b>
4.8.1	Social protection in mitigating economic insecurity. <i>Alessandra Coli</i> . . . . .	440
4.8.2	Changes in poverty concentration in U.S. urban areas. <i>Francesco Andreoli and Mauro Mussini</i> . . . . .	450
4.8.3	Evaluating sustainability through an input-stateoutput framework: the case of the Italian provinces. <i>Achille Lemmi, Laura Neri, Federico M. Pulselli</i> . . . . .	458
<b>4.9</b>	<b>New Methods and Models for Ordinal Data</b>	<b>466</b>
4.9.1	Weighted and unweighted distances based decision tree for ranking data. <i>Antonella Plaia, Simona Buscemi, Mariangela Sciandra</i> . . . . .	466
4.9.2	A dissimilarity-based splitting criterion for CUBREMOT. <i>Carmela Cappelli, Rosaria Simone and Francesca Di Iorio</i> . . . . .	474
4.9.3	Constrained Extended Plackett-Luce model for the analysis of preference rankings. <i>Cristina Mollica and Luca Tardella</i> . . . . .	480
4.9.4	A prototype for the analysis of time use in Italy. <i>Stefania Capecchi and Manuela Michelini</i> . . . . .	487
<b>4.10</b>	<b>New Perspectives in Supervised and Unsupervised Classification</b>	<b>493</b>
4.10.1	Robust Updating Classification Rule with applications in Food Authenticity Studies. <i>Andrea Cappozzo, Francesca Greselin and Thomas Brendan Murphy</i> . . . . .	493
4.10.2	A robust clustering procedure with unknown number of clusters. <i>Francesco Dotto and Alessio Farcomeni</i> . . . . .	500
4.10.3	Issues in joint dimension reduction and clustering methods. <i>Michel van de Velden, Alfonso Iodice D'Enza and Angelos Markos</i> . . . . .	508
<b>4.11</b>	<b>New Sources, Data Integration and Measurement Challenges for Estimates on Labour Market Dynamics</b>	<b>514</b>
4.11.1	The development of the Italian Labour register: principles, issues and perspectives . <i>C. Baldi, C. Ceccarelli, S. Gigante, S. Pacini</i> . . . . .	514
4.11.2	Digging into labour market dynamics: toward a reconciliation of stock and flows short term indicators. <i>F. Rapiti, C. Baldi, D. Ichim, F. Pintaldi, M. E. Pontecorvo, R. Rizzi</i> . . . . .	523
4.11.3	How effective are the regional policies in Europe? The role of European Funds. <i>Gennaro Punzo, Mariateresa Ciommi, and Gaetano Musella</i> . . . . .	531
4.11.4	Labour market condition in Italy during and after the financial crises: a segmented regression analysis approach of interrupted time series. <i>Lucio Masserini and Matilde Bini</i> . . . . .	539

<b>4.12</b>	<b>Quantile and Generalized Quantile Methods</b>	<b>547</b>
4.12.1	Multiple quantile regression for risk assessment. <i>Lea Petrella and Valentina Raponi</i>	547
4.12.2	Parametric Modeling of Quantile Regression Coefficient Functions. <i>Paolo Frumento and Matteo Bottai</i>	550
4.12.3	Modelling the effect of Traffic and Meteorology on Air Pollution with Finite Mixtures of M-quantile Regression Models. <i>Simone Del Sarto, Maria Francesca Marino, Maria Giovanna Ranalli and Nicola Salvati</i>	552
4.12.4	Three-level M-quantile model for small area poverty mapping. <i>Stefano Marchetti and Nicola Salvati</i>	560
<b>4.13</b>	<b>Recent Advances on Extreme Value Theory</b>	<b>560</b>
4.13.1	Extremes of high-order IGARCH processes. <i>Fabrizio Laurini</i>	560
<b>4.14</b>	<b>Spatial Economic Data Analysis</b>	<b>569</b>
4.14.1	Spatial heterogeneity in principal component analysis: a study of deprivation index on Italian provinces. <i>Paolo Postiglione, M. Simona Andreano, Roberto Benedetti, Alfredo Cartone</i>	569
<b>4.15</b>	<b>Spatial Functional Data Analysis</b>	<b>578</b>
4.15.1	Object oriented spatial statistics for georeferenced tensor data. <i>Alessandra Menafoglio and Davide Pigoli and Piercesare Secchi</i>	578
4.15.2	A Spatio-Temporal Mixture Model for Urban Crimes. <i>Ferretti Angela, Ippoliti Luigi and Valentini Pasquale</i>	585
<b>4.16</b>	<b>Statistical Methods for Service Quality</b>	<b>591</b>
4.16.1	Cumulative chi-squared statistics for the service quality improvement: new properties and tools for the evaluation. <i>Antonello D'Ambra, Antonio Lucadamo, Pietro Amenta, Luigi D'Ambra</i>	591
4.16.2	A robust multinomial logit model for evaluating judges' performances. <i>Ida Camminatiello and Antonio Lucadamo</i>	600
4.16.3	Complex Contingency Tables and Partitioning of Three-way Association Indices for Assessing Justice CourtWorkload. <i>Rosaria Lombardo, Yoshio Takane and Eric J Beh</i>	607
4.16.4	Finding the best paths in university curricula of graduates to improve academic guidance services. <i>Silvia Bacci and Bruno Bertaccini</i>	615
<b>4.17</b>	<b>Statistical Modelling for Business Intelligence Problems</b>	<b>623</b>
4.17.1	A nonlinear state-space model for the forecasting of field failures. <i>Antonio Pivatolo</i>	623
4.17.2	Does Airbnb affect the real estate market? A spatial dependence analysis. <i>Mariangela Guidolin and Mauro Bernardi</i>	632
4.17.3	Bayesian Quantile Trees for Sales Management. <i>Mauro Bernardi and Paola Stolfi</i>	640
4.17.4	Discrimination in machine learning algorithms. <i>Roberta Pappadá and Francesco Pauli</i>	648
<b>4.18</b>	<b>Statistical models for sports data</b>	<b>656</b>
4.18.1	The study of relationship between financial performance and points achieved by Italian football championship clubs via GEE and diagnostic measures. <i>Anna Crisci, Sarnacchiaro Pasquale e Luigi D'Ambra</i>	656
4.18.2	Exploring the Kaggle European Soccer database with Bayesian Networks: the case of the Italian League Serie A. <i>Maurizio Carpita and Silvia Golia</i>	665
4.18.3	A data-mining approach to the Parkour discipline. <i>Paola Pasca, Enrico Ciavolino and Ryan L. Boyd</i>	673
4.18.4	Players Movements and Team Shooting Performance: a Data Mining approach for Basketball. <i>Rodolfo Metulini</i>	681

<b>4.19</b>	<b>Supporting Regional Policies through Small Area Statistical Methods</b>	<b>689</b>
4.19.1	Survey-weighted Unit-Level Small Area Estimation. <i>Jan Pablo Burgard and Patricia Dörr</i> . . . . .	689
4.19.2	Robust and model-assisted small area estimation methods: an application to the Banca d'Italia Survey of Industrial and Service Firms. <i>Bottone Marco, Casciano Maria Cristina, Fabrizi Enrico, Filiberti Salvatore, Neri Andrea and Salvati Nicola</i> 698	
<b>4.20</b>	<b>The Second Generation at School</b>	<b>706</b>
4.20.1	Resilient students with migratory background. <i>Anna Di Bartolomeo and Giuseppe Gabrielli</i> . . . . .	706
4.20.2	Residential Proximity to Attended Schools among Immigrant-Origin Youths in Bologna. <i>Federica Santangelo, Debora Mantovani and Giancarlo Gasperoni</i> . . . . .	715
4.20.3	From school to ... future: strategies, paths and perspectives of immigrant immediate descendants in Naples . <i>Giustina Orientale Caputo and Giuseppe Gargiulo</i> 723	
<b>4.21</b>	<b>Tourism Destinations, Household, Firms</b>	<b>731</b>
4.21.1	The Pricing Behaviour of Firms in the On-line Accommodation Market: Evidence from a Metropolitan City. <i>Andrea Guizzardi and Flavio Maria Emanuele Pons</i> 731	
4.21.2	The Migration-Led-Tourism Hypothesis for Italy: A Survey. <i>Carla Massidda, Romano Piras and Ivan Etzo</i> . . . . .	741
4.21.3	Tourism Statistics: development and potential uses. <i>Fabrizio Antolini</i> . . . . .	749
4.21.4	Tourism attractiveness in Italy. Some empirical evidence comparing origin-destination domestic tourism flows. <i>Francesca Giambona, Emanuela Dreassi, and Alessandro Magrini</i> . . . . .	757
<b>4.22</b>	<b>What's Happening in Africa</b>	<b>765</b>
4.22.1	Environmental shocks and internal migration in Tanzania. <i>Maria Francesca Marino, Alessandra Petrucci, and Elena Pirani</i> . . . . .	765
4.22.2	Determinants and geographical disparities of BMI in African Countries: a measurement error small area approach. <i>Serena Arima and Silvia Polettini</i> . . . . .	773
<b>5</b>	<b>Contributed Sessions</b> . . . . .	<b>781</b>
<b>5.1</b>	<b>Advanced Algorithms and Computation</b>	<b>781</b>
5.1.1	Brexit in Italy. <i>Francesca Greco, Livia Celardo, Leonardo Salvatore Alaimo</i> . 782	
5.1.2	Distance based Depth-Depth classifier for directional data. <i>Giuseppe Pandolfo and Giovanni C. Porzio</i> . . . . .	789
5.1.3	Approximate Bayesian Computation for Forecasting in Hydrological models. <i>Jonathan Romero-Cuéllar, Antonino Abbruzzo, Giada Adelfio and Félix Francés</i> . . . . .	793
5.1.4	Customer Churn prediction based on eXtreme Gradient Boosting classifier. <i>Mohammed Hassan Elbedawi Omar and Matteo Borrotti</i> . . . . .	799
5.1.5	HPC-accelerated Approximate Bayesian Computation for Biological Science. <i>Ritabrata Dutta</i> . . . . .	805
5.1.6	PC Algorithm for Gaussian Copula Data. <i>Vincenzina Vitale and Paola Vicard</i> 813	
<b>5.2</b>	<b>Advances in Clustering Techniques</b>	<b>819</b>
5.2.1	On the choice of an appropriate bandwidth for modal clustering. <i>Alessandro Casa, José E. Chacón and Giovanna Menardi</i> . . . . .	819
5.2.2	Unsupervised clustering of Italian schools via non-parametric multilevel models. <i>Chiara Masci, Francesca Ieva and Anna Maria Paganoni</i> . . . . .	826
5.2.3	Chiara Masci, Francesca Ieva and Anna Maria Paganoni. <i>Laura Bocci and Donatella Vicari</i> . . . . .	832
5.2.4	Robust Reduced k-Means and Factorial k-Means by trimming. <i>Luca Greco and Antonio Lucadamo and Pietro Amenta</i> . . . . .	837
5.2.5	Dirichlet processes, posterior similarity and graph clustering. <i>Stefano Tonellato</i> 843	

5.2.6	Bootstrap ClustGeo with spatial constraints. <i>Veronica Distefano, Valentina Mameli, Fabio Della Marra</i> . . . . .	849
<b>5.3</b>	<b>Advances in Statistical Models</b>	<b>855</b>
5.3.1	Regression modeling via latent predictors. <i>Francesca Martella and Donatella Vicari</i> . . . . .	855
5.3.2	Analysis of dropout in engineering BSc using logistic mixed-effect models. <i>Luca Fontana and Anna Maria Paganoni</i> . . . . .	862
5.3.3	dgLARS method for relative risk regression models. <i>Luigi Augugliaro and Angelo M. Mineo</i> . . . . .	868
5.3.4	A Latent Class Conjoint Analysis for analysing graduates profiles. <i>Paolo Mariani, Andrea Marletta, Lucio Masserini and Mariangela Zenga</i> . . . . .	874
5.3.5	A longitudinal analysis of the degree of accomplishment of anti-corruption measures by Italian municipalities: a latent Markov approach. <i>Simone Del Sarto, Michela Gnaldi, Francesco Bartolucci</i> . . . . .	880
5.3.6	Modelling the effect of covariates for unbiased estimates in ecological inference methods. <i>Venera Tomaselli, Antonio Forcina and Michela Gnaldi</i> . . . . .	886
<b>5.4</b>	<b>Advances in Time Series</b>	<b>892</b>
5.4.1	Filtering outliers in time series of electricity prices. <i>Ilaria Lucrezia Amerise</i> . . .	892
5.4.2	Time-varying long-memory processes. <i>Luisa Bisaglia and Matteo Grigoletto</i>	899
5.4.3	Statistical Analysis of Markov Switching DSGE Models. <i>Maddalena Cavicchioli</i>	905
5.4.4	Forecasting energy price volatilities and comovements with fractionally integrated MGARCH models. <i>Malvina Marchese and Francesca Di Iorio</i> . . . . .	910
5.4.5	Improved bootstrap simultaneous prediction limits. <i>Paolo Vidoni</i> . . . . .	916
<b>5.5</b>	<b>Data Management</b>	<b>922</b>
5.5.1	Using web scraping techniques to derive co-authorship data: insights from a case study. <i>Domenico De Stefano, Vittorio Fuccella, Maria Prosperina Vitale, Susanna Zaccarin</i> . . . . .	922
5.5.2	Dealing with Data Evolution and Data Integration: An approach using Rarefaction. <i>Luca Del Core, Eugenio Montini, Clelia Di Serio, Andrea Calabria</i> . . . . .	929
5.5.3	Monitoring event attendance using a combination of traditional and advanced surveying tools. <i>Mauro Ferrante, Amit Birenboim, Anna Maria Milito, Stefano De Cantis</i> . . . . .	935
5.5.4	Indefinite Topological Kernels. <i>Tullia Padellini and Pierpaolo Brutti</i> . . . . .	941
5.5.5	Data Integration in Social Sciences: the earnings intergenerational mobility problem. <i>Veronica Ballerini, Francesco Bloise, Dario Briscolini and Michele Raitano</i>	947
5.5.6	An innovative approach for the GDPR compliance in Big Data era. <i>M. Giacalone, C. Cusatelli, F. Fanari, V. Santarcangelo, D.C. Sinitó</i> . . . . .	953
<b>5.6</b>	<b>Developments in Graphical Models</b>	<b>959</b>
5.6.1	An extension of the glasso estimator to multivariate censored data. <i>Antonino Abbruzzo and Luigi Augugliaro and Angelo M. Mineo</i> . . . . .	959
5.6.2	Bayesian Estimation of Graphical Log-Linear Marginal Models. <i>Claudia Tarantola, Ioannis Ntzoufras and Monia Lupporelli</i> . . . . .	966
5.6.3	Statistical matching by Bayesian Networks. <i>Daniela Marella and Paola Vicard and Vincenzina Vitale</i> . . . . .	972
5.6.4	Sparse Nonparametric Dynamic Graphical Models. <i>Fabrizio Poggioni, Mauro Bernardi, Lea Petrella</i> . . . . .	978
5.6.5	Non-communicable diseases, socio-economic status, lifestyle and well-being in Italy: An additive Bayesian network model. <i>Laura Maniscalco and Domenica Matranga</i> . . . . .	984
5.6.6	Using Almost-Dynamic Bayesian Networks to Represent Uncertainty in Complex Epidemiological Models: a Proposal. <i>Sabina Marchetti</i> . . . . .	990

<b>5.7</b>	<b>Educational World</b>	<b>996</b>
5.7.1	How to improve the Quality Assurance System of the Universities: a study based on compositional analysis . <i>Bertaccini B., Gallo M., Simonacci V., and Menini T.</i> .	996
5.7.2	Evaluation of students' performance at lower secondary education. An empirical analysis using TIMSS and PISA data.. <i>G. Graziosi, T. Agasisti, K. De Witte and F. Pauli</i>	1001
5.7.3	Testing for the Presence of Scale Drift: An Example. <i>Michela Battauz</i> . . . . .	1007
5.7.4	The evaluation of Formative Tutoring at the University of Padova. <i>Renata Clerici, Lorenza Da Re, Anna Giraldo, Silvia Meggiolaro</i> . . . . .	1012
5.7.5	Benefits of the Erasmus mobility experience: a discrete latent variable analysis. <i>Silvia Bacci, Valeria Caviezel and Anna Maria Falzoni</i> . . . . .	1017
5.7.6	University choice and the attractiveness of the study area. Insights from an analysis based on generalized mixed-effect models. <i>Silvia Columbu, Mariano Porcu and Isabella Sulis</i> . . . . .	1023
<b>5.8</b>	<b>Environment</b>	<b>1029</b>
5.8.1	The climate funds for energy sustainability: a counterfactual analysis. <i>Alfonso Carfora and Giuseppe Scandurra</i> . . . . .	1029
5.8.2	Exploratory GIS Analysis via Spatially Weighted Regression Trees. <i>Carmela Iorio, Giuseppe Pandolfo, Michele Staiano, and Roberta Siciliano</i> . . . . .	1036
5.8.3	A functional regression control chart for profile monitoring. <i>Fabio Centofanti, Antonio Lepore, Alessandra Menafoglio, Biagio Palumbo and Simone Vantini</i>	1042
5.8.4	Understanding pro-environmental travel behaviours in Western Europe. <i>Gennaro Punzo, Rosalia Castellano, and Demetrio Panarello</i> . . . . .	1047
<b>5.9</b>	<b>Family &amp; Economic issues</b>	<b>1053</b>
5.9.1	Measuring Economic Uncertainty: Longitudinal Evidence Using a Latent Transition Model. <i>Francesca Giambona, Laura Grassini and Daniele Vignoli</i> . . . . .	1053
5.9.2	Intentions to leave Italy or to stay among foreigners: some determinants of migration projects. <i>Ginevra Di Giorgio, Francesca Dota, Paola Muccitelli and Daniele Spizzichino</i> . . . . .	1060
5.9.3	Wages differentials in association with individuals, enterprises and territorial characteristics. <i>S. De Santis, C. Freguja, A. Masi, N. Pannuzi, F. G. Truglia</i> . . . . .	1066
5.9.4	The Transition to Motherhood among British Young Women: Does housing tenure play a role?. <i>Valentina Tocchioni, Ann Berrington, Daniele Vignoli and Agnese Vitali</i> . . . . .	1072
<b>5.10</b>	<b>Finance &amp; Insurance</b>	<b>1078</b>
5.10.1	Robust statistical methods for credit risk. <i>A. Corbellini, A. Ghiretti, G. Morelli and A. Talignani</i> . . . . .	1078
5.10.2	Depth-based portfolio selection. <i>Giuseppe Pandolfo, Carmela Iorio and Antonio D'Ambrosio</i> . . . . .	1085
5.10.3	Estimating large-scale multivariate local level models with application to stochastic volatility. <i>Matteo Pelagatti and Giacomo Sbrana</i> . . . . .	1091
<b>5.11</b>	<b>Health and Clinical Data</b>	<b>1097</b>
5.11.1	Is retirement bad for health? A matching approach. <i>Elena Pirani, Marina Ballerini, Alessandra Mattei, Gustavo De Santis</i> . . . . .	1097
5.11.2	The emergency department utilisation among the immigrant population resident in Rome from 2005 to 2015. <i>Eleonora Trappolini, Laura Cacciani, Claudia Marino, Cristina Giudici, Nera Agabiti, Marina Davoli</i> . . . . .	1104
5.11.3	Multi-State model with nonparametric discrete frailty. <i>Francesca Gasperoni, Francesca Ieva, Anna Maria Paganoni, Chris Jackson and Linda Sharples</i> . . . . .	1111
5.11.4	A Functional Urn Model for CARA Designs. <i>Giacomo Aleffi, Andrea Ghiglietti, and William F. Rosenberger</i> . . . . .	1117

5.11.5	Assessment of the INLA approach on gerarchic bayesian models for the spatial disease distribution: a real data application. <i>Paolo Girardi, Emanuela Bovo, Carmen Stocco, Susanna Baracco, Alberto Rosano, Daniele Monetti, Silvia Rizzato, Sara Zamberlan, Enrico Chinellato, Ugo Fedeli, Massimo Rugge</i> . . . . .	1123
<b>5.12</b>	<b>Medicine</b>	<b>1129</b>
5.12.1	Hidden Markov Models for disease progression. <i>Andrea Martino, Andrea Ghiglietti, Giuseppina Guatteri, Anna Maria Paganoni</i> . . . . .	1129
5.12.2	A simulation study on the use of response-adaptive randomized designs. <i>Anna Maria Paganoni, Andrea Ghiglietti, Maria Giovanna Scarale, Rosalba Miceli, Francesca Ieva, Luigi Mariani, Cecilia Gavazzi and Valeria Edefonti</i> . . . . .	1136

## 1. Preface

This book includes the papers presented at the "49th Meeting of the Italian Statistic Society". The conference has registered 445 participants, 350 reports divided into 4 plenary sessions, 20 specialised sessions, 25 sessions solicited, 27 sessions spontaneous, 2 poster sessions. The high number of participants, the high quality of the interventions, the productive spirit of the conference, the ability to respect the time table, are the main indices of the full success of this conference. The meeting hosted also, as plenary sessions, the ISTAT annual report 2018, and a round table on statistics and job markets. Methodological plenary sessions concerned with ordinal data, the dynamics of climate change and models in biomedicine.

Moreover, two related events were held: Start-up Research (SUR) and Stats Under the Stars (SUS4). The SUS4 event attracted many sponsors of statistical, financial, editorial fields as well as numerous students, not only from Italy but also from abroad (Groningen, Tyumen, Barcelona, and Valencia): 98 students for a total of 25 teams. The SUR was a 2-day meeting where small research groups of young scholars, advised by senior researchers with a well-established experience in different areas of Statistics, was asked to develop innovative methods and models to analyse a common dataset from the Neurosciences.

# Is retirement bad for health? A matching approach

## *Il pensionamento fa male alla salute? Una analisi causale*

Elena Pirani, Marina Ballerini, Alessandra Mattei, Gustavo De Santis

**Abstract** The aim of this paper is to assess the causal impact of the transition from work to retirement on individual health in various European countries in recent years. The health effects of this transition are far from clear: the specialized literature reports both positive and negative consequences, however, most of the early studies focus on associations rather than causal relationships. We estimate causal effects of retirement on three measures of health and well-being – self-rated health, depression, quality of life – using a propensity score matching approach under the assumption of selection on observables on data coming from SHARE, the longitudinal Survey on Health, Ageing and Retirement in Europe, in the years between 2004 and 2016. Our results suggest that the transition from work to retirement negatively affect self-rated health almost everywhere in Europe; nevertheless, the quality of life seems to improve, especially in Continental and Mediterranean countries.

**Abstract** L'obiettivo di questo lavoro è valutare l'impatto causale del pensionamento sulla salute individuale in vari paesi europei. La letteratura riporta effetti sia positivi che negativi del pensionamento sulla salute e benessere degli individui, tuttavia, la maggior parte degli studi precedenti si concentra sulle associazioni piuttosto che sulle relazioni causali. Considerando tre misure di salute – salute percepita, depressione e qualità della vita – sulla base dei dati delle indagini SHARE svolte tra il 2004 e il 2016, stimiamo gli effetti causali del pensionamento sulla salute utilizzando l'approccio del propensity score matching sotto l'ipotesi di assenza di confondimento. I risultati suggeriscono che il pensionamento ha effetti negativi sulla salute percepita in tutti i paesi europei, mentre la qualità della vita sembra beneficiarne, soprattutto nei paesi dell'Europa continentale e mediterranea.

**Key words:** Retirement; Europe; Share; Causal inference.

## 1 Retirement and health: a complex connection

The effects on health of the transition from work to retirement are unclear. Several scholars argue that retirement itself is a stressful event (e.g., Carp 1967; MacBride 1976), which can lead to a break with support networks and friends, and may be accompanied by feelings of loneliness, uselessness, or obsolescence (MacBride 1976). Others claim instead that retirement is a health-preserving life event: it is a relief from work-related stress (Eibich 2015), and encourages health-improving behaviors – such as quit smoking – or increased physical activity (Eibich 2015; Insler 2014).

A strand of the literature reports a significant increase in health after retirement (e.g. Blake and Garrouste 2012; Charles 2004; Coe and Zamarro 2011; Insler 2014; Latif 2013; Neuman 2008), whereas other researchers find significant negative effects on both objective and subjective health measures (e.g. Behncke 2012; Dave et al. 2008; Sahlgren 2012), and also on cognitive functions (Bonsang et al. 2012; Mazzonna and Peracchi 2012). Bound and Waidmann (2007) showed a short-term positive relationship between retirement and health for men but not for women.

In a large part of the previous studies, the focus was on the *association* between health and retirement, and comparisons between the retired and those still working were usually not adjusted for health characteristics before retirement: this adjustment is instead crucial for drawing inference on the causal effects of retirement on health (Coe and Zamarro 2011).

In this paper, we aim to assess the *causal* impact on health of the transition from work to retirement by applying a propensity score matching approach under the assumption of selection on observable to the data of the Survey on Health, Ageing and Retirement in Europe (SHARE). We refer to several European countries, and analyse the heterogeneity of the causal effects across different geographical areas.

## 2 Data and method

Our empirical analyses were based on SHARE, the Survey on Health, Ageing and Retirement in Europe, which is a panel including five regular waves plus a wave on people's life histories (wave 3, SHARELIFE, which, however, is not considered here because it collected very different information compared to the regular waves and excluded some of the variables we need). In each wave, SHARE data cover the key areas of life (health, socio-economic status social and family networks, etc.) of more than 60,000 individuals aged 50 or over. We focused on the period between 2004 and 2016 and on a subset of the SHARE countries that participated in at least three consecutive waves (Austria, Belgium, Czech Republic, Denmark, Estonia, France, Germany, Italy, the Netherlands, Slovenia, Sweden, Switzerland, and Spain), and for which we had all the information we needed for our analysis.

We selected three health and well-being indicators. As a general measure of health, we used self-rated health, dichotomizing the original 5-point scale into good

(excellent, very good, good) and poor (fair, poor) perceived health (preliminary analyses considering the original formulation proved consistent results). Because of its subjective nature, self-rated health may change across populations (Prinja et al., 2012); however, various studies proved its power in predicting objective health conditions (Egidi and Spizzichino, 2006), physical and emotional well-being (Bayliss et al., 2012), and even mortality (Idler and Benyamini, 1997). Moreover, we used a composite indicator of depression constructed from the 12 basic items of the EURO-D scale (Prince et al., 1999): depressed mood, pessimism, suicidality, guilt, sleep, interest, irritability, appetite, fatigue, concentration, enjoyment and tearfulness. This scale, which ranges from 0 (not depressed) to 12 (very depressed), was developed in an effort to derive a common scale of depression symptoms, especially in later life, based on different indicators in several European countries. Finally, we considered a theoretically grounded measure of quality of life, i.e., a composite indicator based on four subscales corresponding to four life domains (Hyde et al., 2003; Mehrbrodt et al., 2017): control (C), autonomy (A), self-realization (S) and pleasure (P). After reversing the original scale, this indicator, which was proved to represent a reliable indicator of quality of life in the context of research on ageing (Wiggins et al., 2008), scored between 0 (high quality of life) and 36 (low quality of life).

Because our objective was the estimation of a causal effect of entering retirement on individual well-being in the short run, we focused on the subsample of those who were in the labor market (employed or self-employed) in the waves  $t=1,2,4$  of the survey and were either in the labor market or retired in the waves  $t=2,4,5$ . Those who got out of the labor market for other reasons (e.g., unemployment) were discarded from our subsample.

We followed the “potential outcome” approach (e.g., Imbens and Rubin, 2015). For each unit  $i, i=1, \dots, n$ , we considered a vector  $X_i$  of background variables. Let  $D_i$  denote the treatment variable indicator, equal to 1 if unit  $i$  retires between two consecutive waves of the survey – waves  $w1$  and  $w2$ ; waves  $w2$  and  $w4$ , or waves  $w4$  and  $w5$  – and zero otherwise. Under the Stable Unit Treatment Value Assumption (SUTVA) (Rubin, 1980), for each unit  $i$  there are two potential outcomes at a future point in time after treatment (at waves  $w4, w5$  or  $w6$ ): the value of the health outcome  $Y$  if unit  $i$  retired –  $Y_i(1)$  – and the value of  $Y$  at the same future point in time if the unit did not retire –  $Y_i(0)$ . The causal effect of the transition from work to retirement for each unit is defined as a comparison of the treatment and control potential outcomes,  $Y_i(1)$  and  $Y_i(0)$ , typically their difference. In this paper we focus on Average Treatment Effects on the Treated (ATT effects), that is, the effects of the transition from work to retirement averaged over the subpopulation of units who actually retired:  $ATT = E[Y_i(1) - Y_i(0) | D=1]$ .

Because we used observational data, we needed to introduce some assumptions on the treatment-assignment mechanism to draw inference on the causal effects of interest. We assumed unconfoundedness (or selection on observables), which implies that, conditioning on the observed covariates, an experimental-like context is reproduced. Formally, unconfoundedness requires that the treatment assignment is independent of the potential outcomes:  $D_i \perp (Y_i(0), Y_i(1)) | X_i$ . We also assumed that

there was sufficient overlap in the joint distribution of the covariates between treated and control subjects:  $0 < P(D_i=1|X_i=x) < 1$  for each  $i$ . Under these assumptions, we applied a statistical matching technique, the purpose of which was to select a sub-group of control subjects (who did not retire between two subsequent waves) who were, in all respects, as similar as possible to the treated subjects, i.e., those who retired from work. We matched individuals based on the propensity score, or the probability of entering retirement conditional on the observed covariates. The propensity score is a balancing score, that is, covariates are independent of the treatment conditional on the propensity score. Moreover, if the unconfoundedness and the overlap assumptions hold conditional on covariates, they also hold conditional on the propensity score (Rosenbaum and Rubin 1983). Therefore, matching on the propensity score is sufficient to remove confounding.

The variables on which we constructed our propensity score included individual socio-demographic characteristics (e.g., age, living arrangement, relatives alive, level of education) and health-related behaviours and health conditions (e.g., smoking and drinking, mobility index, as well as self-rated health, quality of life, and depression). We also introduced the type and the sector of work, even if we acknowledge that these aspects only partially account for important aspects of working life, such as stressing factors or autonomy in decisions, which could importantly contribute to individual's health and wellbeing. We imposed an exact matching on country of residence and gender. On the basis of the estimated propensity score, for each of the 1124 retired individuals we selected as a match the closest individual – i.e., a person of the same sex, from the same country and with very similar pre-treatment characteristics – among the 6250 potential controls (1-to-1 nearest neighbor matching; Abadie and Imbens 2011).

### 3 Preliminary results

The check of the covariate balance (i.e., similarity of treated and controls individuals in terms of covariates) proved that the matching procedure was successful: after matching, the differences between the two groups (retired and non-retired) in terms of socio-demographic, work-related and health covariates either disappeared (best case) or were drastically reduced (not shown here). We proceeded then to the estimation of the causal effect of retirement on health, by computing the Average Treatment Effects on the Treated (ATT) using a matching estimator.

The first part of Table 1 reports the ATT effects of retirement on the three well-being indicators considered, computed for all the SHARE countries together. Our results show a worsening of self-rated health after retirement; conversely, they also convey the impression of a slightly improvement in terms of (less) depression and (higher) quality of life. Note however that these two latter estimated effects are very small in absolute terms and not statistically significant.

In order to account for the heterogeneity of people living in the different European countries, we estimated the ATT effects separately for the Nordic

countries (Denmark and Sweden), Continental countries (Austria, Belgium, France, Germany, the Netherlands, and Switzerland), Mediterranean countries (Spain and Italy), and East European countries (Czech Republic, Slovenia, Estonia). The negative effect of retirement on self-rated health persisted for all European areas, even if with a loss of significance for East European countries.

Considering European countries altogether masks some territorial differences for the other two well-being indicators: both depression and quality of life levels increase for retired people in Continental and Mediterranean countries (although the effect is not statistically significant for the second group, maybe due to the small sample size). On the contrary, in Nordic countries retirement seems to determine a detrimental effect also on depression and quality of life (but again results are not statistically significant), whereas for Eastern European countries the effect on the two well-being variables diverges.

**Table 1:** Estimated ATT effects and their standard errors, for all countries, and by groups of countries. SHARE 2004-2016.

			Self-rated health	Depression	Quality of life
All countries	treated (n=1124),	ATT	0.09	-0.12	-0.17
	matched controls (n=1124)	<i>Std Err</i>	<i>0.01</i>	<i>0.07</i>	<i>0.21</i>
By group of countries:					
Nordic	treated (n=194),	ATT	0.09	0.13	0.29
	matched controls (n=194)	<i>Std Err</i>	<i>0.03</i>	<i>0.15</i>	<i>0.44</i>
Continental	treated (n=474),	ATT	0.08	-0.10	-0.91
	matched controls (n=474)	<i>Std Err</i>	<i>0.02</i>	<i>0.11</i>	<i>0.31</i>
Mediterranean	treated (n=116),	ATT	0.12	-0.14	-0.13
	matched controls (n=116)	<i>Std Err</i>	<i>0.05</i>	<i>0.22</i>	<i>0.68</i>
East European	treated (n=340),	ATT	0.04	-0.24	0.68
	matched controls (n=340)	<i>Std Err</i>	<i>0.03</i>	<i>0.15</i>	<i>0.44</i>

In our analysis the richness of background (i.e., pre-treatment) information allowed us to adjust treatment comparisons for a large set of pre-treatment characteristics – in terms of health, life-style behaviors, socio-demographic characteristics and factors linked to the (previous) working condition – and thus the assumption of selection on observable appears to be plausible. Under this assumption, we found that the effects of retirement on health vary not only according to the context of reference, but also depending on the specific health/well-being indicator considered.

It is thus worth to investigate more in detail the mechanisms through which retirement affects the various dimensions of health and well-being. Specifically, aspects such as family types and intergenerational relationships, social relationships, embeddedness in social network, and job characteristics will be examined in our future research.
