The editors would like to thank all those who contributed with their work to the international congress and given their authorisation for publication. The editors and the organizers cannot be held responsible for either the contents or opinions expressed in these works. In addition, the authors hereby declare that the contents of this communication are original ones, or when appropriate, they have the corresponding authorisation to include, use or adapt long quotations or tables and illustrations from other works.

This is a double blind peer review publication evaluated by experts in the field of fortified landscapes and fortresses. The sources and information found within that particular work has been verified by the referee committee. The referee committee was selected by the scientific committee of the Conference among the most experts in this field; peer review referee screened the submitted articles. This process has been chosen to encourage authors to meet the accepted standards of their discipline and to prevent the dissemination of irrelevant findings or incorrect interpretations.

INTRODUCTION

The programme will give a particular attention to the priorities expressed by the recent document of ICOFORT, and in particular to the themes of cultural tourism, training in regard to the development and review of world Heritage Site nominations, fortification glossary of terminology, the evaluation on Fortifications and military landscapes, the relations between the conservation of fortifications and processes of climate change, and also the dissemination of web information. The research projects will be organized in three thematic areas related to the ancient fortifications of medieval period and his late medieval developments, to the great Renaissance and late Renaissance fortifications, and to the modern and contemporary fortified systems.

The international conference “Between East and West: transposition of cultural systems and military technology of fortified landscapes” is organized in order to compare the results and the updates about the several researches made by experts of various nationalities, about the theme of cultural routes and fortified landscapes.

The scientific knowledge, the analysis, the documentation and the architectural survey and of the heritage in all its meanings, are essential instruments for the understanding and the improvement of any information and sign that history and culture has produced in each places or in a specific geographic area. These signs are in any case the result of the transposition of cultural models, of building technologies and offensive and/or defensive strategies, that have been tested, consolidated and exported for a long time, and that have determined the image of whole territories.

“The structure of a site is not a fixed condition, usually eternal rule places sometimes change quickly. This does not mean that the genius loci must necessarily change or be lost”. (C. Norberg-Schulz)

The implementation of the knowledge, the specific studies and the documentation programs, also constitute the main basis for the exercise of critical and interpretative activities, in order to training and to develop a particular settlement, city or area. Besides, they are also useful for the expectation of the necessary specific planning for the conservation and the improvement, that are aimed at promoting the conscious development of human activities in that places.

This international conference aims at comparing the experiences made in this scientific area, that have allowed the development of operational methods for researches useful for the correct understanding of both the architectures and the historical and archaeological complexes. Furthermore, it also aims at taking into consideration the cultural and environmental contexts of the contemporary history, giving essential advices for a critical reading and a proper evaluation about the conservation actions for this important heritage.

S. Bertocci, S. Parrinello, G. Pancani
THE RESEARCH PROJECT DOCUMENTING THE FORTRESSES OF THE CASENTINO AREA

Giovanni Pancani

University of Florence, Italy

Keywords: Fortresses, 10th/15th century, Casentino area (Italy), 3D laser scanner survey

The family of the Conti Guidi, whose presence in Casentino is documented from the end of the 10th century onwards, built numerous fortifications to control the area. The first reliable reference to the presence of this important dynasty, probably of Langobard origin, which extended its dominion over central Italy, especially along the Apennine ridge between Emilia Romagna and Tuscany, is to Count Tegrimo (967), thought to be a relative of the Emperor Otto I. The Guidi Conti exerted their power in the north of Casentino, in the area situated according to modern municipal boundaries, between the Boroughs of Poppi, Chiusi della Verna, Castel San Niccolò, Montemignaio, Pratovecchio and Stia, building numerous castles, lookout towers and fortified hamlets there, from the 10th to the 15th centuries. From these sites they were able to reach the Apennine passes which led to Emilia Romagna and Florence. Its closeness to the Guelfs of Florence and the Ghibelline bishopric of Arezzo made Casentino and its lords party to changing fortunes and alliances and one of the most bloody battles of the Tuscan middle ages, the battle of Campaldino, which in 1289 had among its ranks the young Dante Alighieri. Of the original system of fortifications many castles have remained to the present day, some in excellent condition, others less so, and some of which only a few ruins remain.

The research project for surveying the fortifications built by the Guidi Conti in Casentino is inspired by the hope that the documentation and cataloguing of these monuments may lead to an improved valorisation and preservation of the same.

Casentino valley: in the background the valley of Campaldino and the hill where the castle of Poppi is located.
At times like now, when resources are extremely limited, it is of strategic importance to develop programmes able to valorise and attract interest in these architectural systems so closely connected to local history given that their very construction was a result of the political and administrative control of the area. Successful valorisation of this extraordinary system of fortifications may therefore help to attract resources for their preservation and also act as a driving force for the sustainable touristic development of the valley.

The project began with a survey of the Castle of the Guidi Conti in Poppi, that is to say the most historically-architecturally important building in the area due to its highly strategic vantage point, the peak of a hill central to the valley, offering a view in all directions. The castle, surrounded by the beautiful fortified hamlet of Poppi, was formerly the most important residence in the political vicissitudes of the Tuscan Guidi and later the seat of the Florentine Signoria controlling northern Casentino.

The main project, entailing a morphometric survey of the Castle, was tackled using laser scanner instruments, coupled with high definition photographic surveys to acquire qualitatively significant data for assessing the degree of decay of the surfaces. The purpose of such surveys was to gather the necessary information for developing a reference database of the state of preservation and/or decay of the monument and to develop three-dimensional, multimedia models for its popularisation and valorisation.

We are confident that this project, the first two-dimensional reconstructions of which can be seen at the exhibition currently on in the castle premises, could be a valid instrument for encouraging and presenting the morphometric documentation project of the Guidi castles to the many public bodies and private owners of other important fortified sites. In fact, given the large number of castles and fortified hamlets scattered through the various boroughs of the valley, interest in this initiative needs to be stimulated; the presentation, in such an exceptional setting, of the work done on the most significant of these sites may help to create the right cultural climate for attracting owners and public bodies to embark on a programme leading the various parties involved to achieve the aforementioned goals. The project should therefore be conducted with the synergy of various disciplines able to valorise and identify all the related aspects.

As well as the more famous sites such as Poppi, Romena, Porciano, Chiusi, Castel San Niccolò, there are lesser hamlets where only traces of the ancient fortifications remain and sites where only the expert eye of the archaeologist can assist in identifying the faint indications present.

Confirming the excellence and importance of this programme and of the work done up until now is the survey project of the entire hamlet of Poppi which, thanks to the collaboration of the Town Council, we have been able to embark on over the last few days.
The work relating to documentation of the Porta a Porrena, situated under the Benedictine Abbey of San Fedele was, incidentally, the subject of a recent study workshop. These surveys were also used to verify the development of a methodological protocol for the realisation and certification of surveys using 3D laser scanners. Publication of the first, albeit partial, results of these surveys, especially that of Poppi castle, is merely the first step of this project which should lead to the participation of other interested parties, in the conviction that the relevance of such experience and the educative and analytical possibilities it throws up should be able to attract the attention of public bodies and local, provincial and regional administrations. A method of documentation such as that proposed would enable the creation of an organised network of Guidi sites on a consortium basis as the next step, thereby permitting a better understanding and interpretation of the system of fortifications built in northern Casentino by the Conti Guidi family. The next stage would then be to conduct surveys of all the known sites and, subsequently, in-depth investigations aimed at identifying the presence in the area of further evidence of the past, adding to the already consistent historic and architectural heritage of the Valley. The natural outcome being to find the funds needed for the maintenance, preservation and adequate valorisation which such a heritage deserves. To conclude, the aim of the programme is to create from the original medieval network of fortifications created to control the territory a modern network of the same which ensures their valorisation and safeguarding.

*The point cloud from the 3D survey of the castle of Poppi.*
