THE 12th EUROPEAN CONFERENCE ON PRECISION AGRICULTURE
8-11 July 2019
Montpellier
France

BOOK OF ABSTRACTS OF ALL THE POSTERS
Foreword

Prof. Bruno Tisseyre, Conference Chair

May 25, Montpellier SupAgro, Montpellier, France

Dear Reader,

In 2001, the city of Montpellier hosted the 3rd European Conference on Precision Agriculture (ECPA). Now, 18 years later, we are very pleased to welcome the Precision Agriculture scientific community back to Montpellier for 12ECPA.

We sincerely hope this 12th European Conference on Precision Agriculture will result in a profitable meeting for everyone and will provide some solutions to the challenges that modern agriculture is facing.

We are grateful to Montpellier SupAgro, Irstea and the International Society of Precision Agriculture (ISPA) for supporting us in the organisation of this event. We are grateful to all the members of the Poster Scientific Committee for their invaluable contribution in assuring the scientific quality of the Posters presented at this conference.

We appreciate the financial contribution of all the sponsors of 12ECPA, which includes private companies as well as public institutions and consortia. We would also like to express our gratitude to all the authors and attendees. The conference is nothing without your support and engagement. We will have more than 120 oral communications (compiled in a Conference Proceedings) and nearly 100 posters that the extended abstracts are presented in this book. This is a strong indication of the trust placed in this conference as a source of knowledge related to Precision Agriculture.

Finally, as the Chair, I am indebted to the support and hard work of the conference Organising Committee over the past 2 years in bidding for and delivering this conference. It is simply not possible to do this without a fantastic team behind the scenes. The Organising Committee is composed of academics and engineers from a joint team of Montpellier SupAgro (Institute for Higher Education in Agriculture) and Irstea (National Research Institute of Science and Technology for the Environment and Agriculture); The UMR ITAP team. We are all both honoured and delighted to have worked for you and to have helped advance methods and techniques in Precision Agriculture.

Bon congrès à tous !

Bruno
Organising Committee
Chair: Prof Bruno Tisseyre (Montpellier SupAgro)
Vice Chair: Dr James Taylor (Irstea)

Members:
Dr Guilhem Brunel (Montpellier SupAgro)
Eng. Thomas Crestey (Montpellier SupAgro)
Dr. Nicolas Devaux (Montpellier SupAgro)
Dr Arnaud Ducanchez (Montpellier SupAgro)
Dr Serge Guillaume (Irstea)
Mrs Laure Haon (Montpellier SupAgro)
Dr Hazael Jones (Montpellier SupAgro)
Eng. Nina Lachia (Montpellier SupAgro)
Eng. Simon Moinard (Montpellier SupAgro)
Dr Olivier Naud (Irstea)
Eng. Pierre Péré (Irstea)
Eng. Léo Pichon (Montpellier SupAgro)
Dr Gilles Rabatel (Irstea)
Eng. Yoann Valloo (Montpellier SupAgro)
Prof Philippe Vismara (Montpellier SupAgro)

Scientific Committee (posters)
The mission of the Scientific Committee has been to guarantee the academic quality of the posters and their extended abstracts of the 12th European Conference on Precision Agriculture by reviewing and assessing each of the proposal received (more than 150 abstracts were received). The committee was chaired by Dr. J. A. Taylor, in his capacity as the editor of the 12th ECPA book of poster abstracts edited in this electronic book. The Scientific Committee was made up of renowned researchers involved in the organising committee. Abstracts of posters have followed a review process in order to guarantee the academic quality of 12th ECPA.
Chair: Dr J. A. Taylor

Members (alphabetical order)
Guillaume Serge Irstea (Montpellier, France)
Naud Olivier Irstea (Montpellier France)
Rabatel Gilles Irstea (Montpellier France)
Tisseyre Bruno Montpellier SupAgro (Montpellier France)
TABLE OF CONTENTS

PREDICTIONS OF Cu, Zn and Cd in Swedish Agricultural Soil from Portable X-ray Fluorescence (PXRF) Data: Potential Foundation for Elemental Maps for Use in Precision Agriculture

Adler K., Piikki K., Söderström M., Eriksson J. and Alshihabi O.

Automatic Control of the Growth of Plants Using Artificial Intelligence and Internet Technology

Agostini A., Wörgötter F.

Employing False Color Infrared Cameras for Biomass Estimation on Natural Grassland.

Togeiro de Alckmin G.; van der Merwe D.; Manzanera J.A.; Tisseyre B.

Estimating Spatial Variability of Crop Yields Using Satellite Vegetation Indices

Ali A., Martelli R., Lupia F., Barbanti L.

Weeding by Yncrea: Mixing Expertises to Create Synergy for the Development of a Robot Dedicated to Weeding Operations

Andriamandroso A.L.H., Cockenpot R., Carneau A., Dugardin C., Zwickert M., Sirois V., Brocvielle L., Thomasin X., Vandoorne B.

Monitoring Wheat Crop N Status Under Humid Mediterranean Conditions Based on Changes in NDVI

Aranguren M. Castellón A., Aizpurua A.

Jujube Fruit Tree Yield Prediction at Field Scale Assimilating LAI from TM8 Data into WOFOST Model

Tiecheng Bai and Benoit Mercatoris

An Approach for Building a Digital Model of Vine Canopies by Using a Multichannel Lidar

P. Berk, P. Bernad, M. Lakota and J. Rakun

Comparing UAV-Based Hyperspectral Data of Corn with Proximal Sensor Data

Variable-Rate Application of Nitrogen for Everyone in Denmark

Birkmose, T.S.

Development of a Dynamic Nitrogen Fertilizer Management Method to Optimize the Agri-Environmental Performance of the Soil-Plant System for Winter Wheat

ESTIMATION OF EAR DENSITY IN WINTER WHEAT CROP BY STEREOSCOPIC IMAGING FOR CROP YIELD PREDICTION

A. Bouvy¹, S. Dandrifosse¹, V. Leemans¹, B. Dumont³, B. Mercatoris¹

PRECISION ULTRASONIC SONAR FOR PASTURE BIOMASS

Bradley S.¹ and Legg M.²

THE ASSOCIATION OF SOIL TYPES AND RAPE BIOMASS FOR NITROGEN VARIABLE RATE APPLICATION

Bruel V.¹, Samain D.², Darbin T.³

USING PROXIMAL IMAGERY TO IMPROVE CARBON AND NITROGEN BALANCES APPROACHES OF A WINTER WHEAT CROP UNDER VARIOUS NITROGEN FERTILIZATION STRATEGIES

Bustillo Vazquez E.¹, Dandrifosse S. 1, Bouvry A. 1, Bebronne R. 1, Dumont B. 2, Longdoz B. 1, Mercatoris B. 1

PREDICTION OF ORGANIC MATTER AND CLAY CONTENTS USING DIFFUSE REFLECTANCE SPECTROSCOPY VIA PARTIAL LEAST SQUARES REGRESSION ANALYSIS AND RANDOM FOREST

Camargo, L.A.¹, Amaral, L.R.², Dos Reis, A. A.¹, Brasco, T.², Magalhães, P.S.G.¹

ADOPTION OF VARIABLE RATE IRRIGATION IN NORTH-EAST ITALY

M. Canavari, R. Wongprawmas, V. Xhakollari and S. Russo

VARIABLE RATE NITROGEN IN DURUM WHEAT ACCORDING TO SPATIAL AND TEMPORAL VARIABILITY

1University of Florence, Florence, Italy.

Introduction
Fostering innovation in agriculture is a catalyst needed in the direction of digitizing agriculture and make it more sustainable. In the last years, several studies and European think thank pushed to put farmers at the centre of the innovation process (Di Mambro, 2017, Eip-Agri, 2019), contributing also to the dignity of this figure starting the food process and providing it for people. The introduction of innovation in farming is a complex process made by different steps in which taking decision is needed. To bring innovation and thus precision agriculture in the farming system means also to approach the ecosystem differently from the past (Lombardo et al., 2018). In this regard, MAMCA (Multi Actor Multi Criteria Analysis) software (Macharis & Baudry, 2018) is a tool to help with decision processes in multi-actor and multi-criteria situations.

Method
The MAMCA software was applied to answer the following question in three different levels of acquired technology: Is Precision Agriculture a real opportunity? For each level, there are several actors involved in an Italian Sustainable Precision Agriculture (SPA) System as farmers, providers, innovation brokers, industry, local community, research, public bodies. There are also several criteria for each actor, mainly divided in environmental, social, economic and operative criteria.
Levels are about the technology adopted in the farming system. The first level is about the introduction of auto-steering in farming, the second one considered the introduction of Variable Rate Technology (VRT) spreaders and seeders based on yield data and the third one is on the introduction of Decision Support System (DSS) in farming.
MAMCA is useful for taking decisions and considering the sustainability and the weight of each actor at the different levels. In this case, we tried to apply it to a poor system, represented as marginal agricultural lands, as a methodology to help actors in the decision process. After the problem and the alternatives have been defined, and the stakeholder analysis has been made, a definition of criteria and relative weights to build a criteria tree is needed. In MAMCA Analysis, the aim and goals of the stakeholder should be considered as criteria and weights and not, as is often done, as effects or impacts. In this case, the weight of each actor was considered equal as a pragmatic approach, in order to make it possible to respect each point of view on an equal basis. Afterwards, a set of indicators are built for each actor and a pairwise comparison of the alternatives respecting each specific criterion can be made. (Baudry et al, 2018)

Results
Results show that the MAMCA method could help to order (Macharis et al., 2012) the likely adoption of SPA from the actor point of view in marginal lands, highlighting contradictions between actors or point of contact between them. This allows to better visualize different views and to address the consequent solution that could be found also for policy makers.

Conclusions
From Figure 1 below, it is clear that different levels of acquired technologies mean different needs and different awareness of the ecosystem surrounding all the actors. It is important to take into account that new technologies acquisition is not only a cultural problem but depends
also on economic availability, only partially solved thought PAC funding. The MAMCA method could help actors in understanding and supporting decisions and make the best choice.
