

UNIVERSITÀ
DEGLI STUDI
FIRENZE

DOTTORATO DI RICERCA IN
NEUROSCIENZE

CICLO XXIX

COORDINATORE Prof. Renato Corradetti

**From genetic analysis of rare neurological diseases to the
study of a translational model of Parkinson's disease**

Settore Scientifico Disciplinare MED/26

Dottorando
Antonella Poggiani

Tutore
Prof. Maria Teresa Dotti

Coordinatore
Prof. Renato Corradetti

Anni 2013/2016

Table of contents

Preface	1
Part 1: Genetic analysis of leukoencephalopathies	2
Background	2
<i>Synthesis of my research experience in the genetic analysis of leukoencephalopathies</i>	6
References	7
PDFa	
PDFb	
Part 2: Characterization of a new transgenic mouse model of spreading of α-synucleinopathy from intestine to brain	10
Abstract	10
Introduction	11
Pathogenesis and clinical features	11
α -synuclein and its major role in PD	13
Modifications of α -synuclein associated with its pathology	14
<i>Mutations</i>	14
<i>Phosphorylation</i>	14
<i>Truncation</i>	14
The hypothesis of prion-like spreading of α -synuclein pathology in PD	15
<i>Staging of PD</i>	15
<i>Transfer of LBs from PD brain to grafted cells</i>	17
<i>Prion-like spreading of α-synuclein</i>	17
<i>Role of enteric nervous system in spreading of α-synucleinopathy</i>	18
Aim of the thesis	20
Experimental procedures	21
Results	28
Characterization of Vitras mice	28
<i>Tissue distribution of transgenic α-Syn(1-120) protein</i>	28
<i>Localization of α-Syn(1-120) protein in the intestinal tissue</i>	29
<i>Cross-sections immunostaining</i>	29
<i>Whole mounts immunohistochemistry</i>	32
Generation of mouse models of α -Syn spreading	34
<i>Vitras x wild-type line</i>	34
<i>Cross-sections immunohistochemistry</i>	34
<i>Whole mounts immunohistochemistry</i>	35
<i>Vitras x Mopas line</i>	36

<i>Characterization of α-synuclein expression in Mopas mice</i>	36
<i>Protein Filtration Assay</i>	38
Discussion and Conclusion	40
Future perspective	44
References	45
